The Pen Cylinder's compactness and easy handling make production lines in a broad range of industries.

A new release with even lighter weight and more

Product series extended even more!

durability in response to needs

A Further 30% **Weight Reduction**

The brass parts for the both end covers and elsewhere have been changed to an aluminum alloy, achieving a 30% weight reduction from the earlier product.

(Double acting type, ϕ 10, 60mm stroke: Previous product weighs 55g [1.94oz.], current Pen Cylinder weighs 33g

4mm Square Sensor Switch

Uses a 4mm [0.157in.] square sensor switch, optimum for saving space in the overall device.

Note: Not available with the ϕ 2.5, ϕ 4 single acting push types

Mounting is Straightforward and Easy

The shape of the end covers has been changed from round to square, allowing easy mounting with a wrench.

U% More Compact

Reduced body dimensions achieves space savings overall, and greater compactness in the user's device.

(For double acting type at ϕ 10, and with 60mm stroke of cylinder with magnet)

to be nickel-plated.)

Handling Instructions and Precautions

General precautions

Mounting

Tighten the mounting nuts to the recommended tightening torques shown below.

Thread size mm	Recommended tightening torque N·cm [in·lbf]
M6×1	240 [21]
M8×1	600 [53]
M10×1	1200 [106]

Piping to single acting type cylinders

Piping directly to single acting type cylinders for air supply can cause the unit to exceed the speed range, and damage the cylinder. Always use a speed controller with meter-in control to ensure that the speed range can ensure the allowable kinetic energy or less.

Media

- Always thoroughly blow off (use compressed air) the tubing before piping. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.
- Use air for the media. For the use of any other media, consult us.
- 3. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 μm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.
 - Collected liquid or dust entering the cylinder may cause improper operation.

Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent. Avoid using spindle oil or machine oil.

Atmosphere

If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.

Select a suitable bore size considering the load and air pressure to obtain the required thrust. Since the figures in the table are calculated values, select a bore size that results in a load Load ratio (load ratio =) of 70% or less (50% or less for high speed application). Calculated value

Allowable Kinetic Energy

Pen cylinders include a cushioning mechanism.

This mechanism is intended to reduce as much as possible the impact of pistons with high kinetic energy when they stop at the end of the stroke. There are 2 types of cushions, as shown below.

Rubber bumpers (Standard equipment)

Rubber bumpers installed on both sides of the piston soften the impact at the end of the stroke, and absorb the impact noise during stopping, in response to high-frequency and high-speed operations. Note that a certain amount of rebound will occur at the end of the stroke on the cylinder with the rubber bumpers.

Variable cushions

Use variable cushions for large load or high-speed operations that rubber bumpers cannot adequately absorb. The impact is absorbed by compressing air, when the piston stops at the end of the stroke. Since the cushioning stroke is included within the cylinder stroke, be careful to ensure that the cushioning is not performed excessively during cylinder applications of 25mm strokes or less. An excessive cushioning can result in too much time for each stroke, reducing efficiency. When operated at or below the absorbable kinetic energy shown in the table below, the cushion seal life is 1 million operations

The kinetic energy of load can be obtained through the formulas shown below.

 $Ex = \frac{m}{2} \mathcal{V}^2$

Ex: Kinetic energy (J)

 $\begin{array}{l} {\rm E'x} {=} \frac{{\rm W}}{2{\rm g}} \, v'^{\rm 2} \\ {\rm E'x} {:} \, {\rm Kinetic \; energy \; [ft \cdot lbf]} \end{array}$

v': Piston speed [ft./sec.]

m: Load mass (kg) u: Piston speed (m/s) W: Load [lbf.]

g: Acceleration of gravity 32.2 [ft./sec.2]

Operating speed range

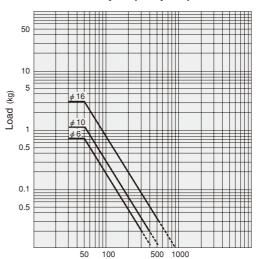

■Rubber bumper50~750mm/s [2.0~29.5in./sec.]

■Variable cushion ……100~1000mm/s [3.9~39.4in./sec.]

10 [0.394]	0.015 [0.011]	0.07 [0.052]
16 [0.630]	0.04 [0.030]	0.18 [0.133]

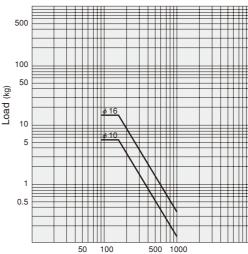

Rubber bumper (Graph 1)

Maximum operating speed (mm/s)

1kg = 2.205 lb.

Variable cushion (Graph 2)

Maximum operating speed (mm/s)

1kg = 2.205 lb.

How to read graphs

From Graph 1, ϕ 16 [0.630in.] with rubber bumpers is selected where the load is 1kg [2.2lb.] and the maximum operating speed is 90mm/s [3.54in./sec.]. From Graph 2, ϕ 16 [0.630in.] with variable cushion is selected where the load is 2kg [4.4lb.] and the maximum operating speed is 400mm/s [15.7in./sec.].

Remark: Includes mounting nut and rod end nut.

For the mass of the double foot bracket, add double the mass of the single foot bracket listed above.

Notes: 1. With supporting bracket and pin.

2. Same for all sensor switch models (ZC253 , ZC230 , ZC201 , ZC205).

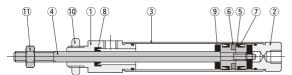

Calculation example: The mass for 2 units of ZC253A, with a double acting type cylinder with magnet with single foot bracket, bore size of 10mm, and stroke of 45mm, is 29.5+7+1+40=77.5g [2.734oz.].

Inner Construction (cannot be disassembled)

Double acting type

●Clevis mounting type (-7)

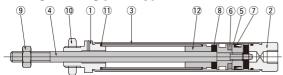

● Lateral piping (-A)

●Lateral piping with mounting thread (-M)

Single acting push type

● Clevis mounting type (-7)

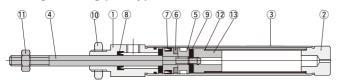

● Lateral piping (-A)

Lateral piping with mounting thread (-M)

Single acting pull type

● Clevis mounting type (-7)

Major Parts and Materials

No.	Parts	Materials
1	Rod cover	Aluminum allau (niakal platad)
2	Head cover	Aluminum alloy (nickel plated)
3	Cylinder tube	Stainless steel
4	Piston rod	Starriess steer
5	Piston	Aluminum alloy
6	Magnet Note1	Plastic magnet
7	Piston seal	
8	Rod seal	Synthetic rubber (NBR)
9	Bumper Note2	
10	Mounting nut	Mild atool (pinkel plated)
11)	Rod end nut	Mild steel (nickel plated)

Notes: 1. For cylinders with magnets. Standard cylinders do not have a builtin magnet for the sensor switch.

2. Not available for bore size ϕ 6.

No.	Parts	Materials
1	Rod cover	Aluminum alloy (nickel plated)
2	Head cover	Aluminum alloy (flicker plated)
3	Cylinder tube	Stainless steel
4	Piston rod	Stairliess steel
5	Piston	Aluminum alloy
6	Magnet Note1	Plastic magnet
7	Piston seal	Cumthatia wubbay (NDD)
8	Bumper Note2	Synthetic rubber (NBR)
9	Rod end nut	Mild steel (nickel plated)
10	Mounting nut	Mild steel (nickel plated)
11)	Spring	Steel
12	Collar	Aluminum alloy

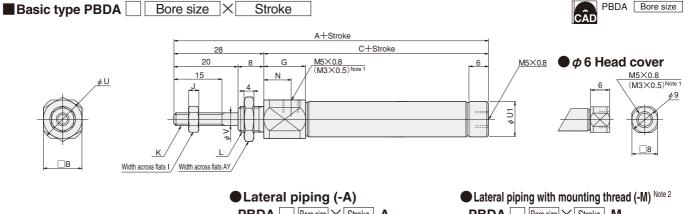

Notes: 1. For cylinders with magnets. Standard cylinders do not have a built-in magnet for the sensor switch.

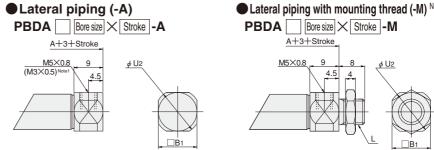

2. Not available for bore size ϕ 6.

No.	Parts	Materials
1	Rod cover	Aluminum alloy (nickel plated)
2	Head cover	Aluminum alloy (mcker plated)
3	Cylinder tube	Stainless steel
4	Piston rod	Stairliess steel
(5)	Piston	Aluminum alloy
6	Magnet Note1	Plastic magnet
7	Piston seal	
8	Rod seal	Synthetic rubber (NBR)
9	Bumper Note2	
10	Mounting nut	Mild steel (nickel plated)
11)	Rod end nut	Mild Steel (Hickel plated)
12	Spring	Steel
13	Collar	Aluminum alloy

Notes: 1. For cylinders with magnets. Standard cylinders do not have a built-in magnet for the sensor switch.

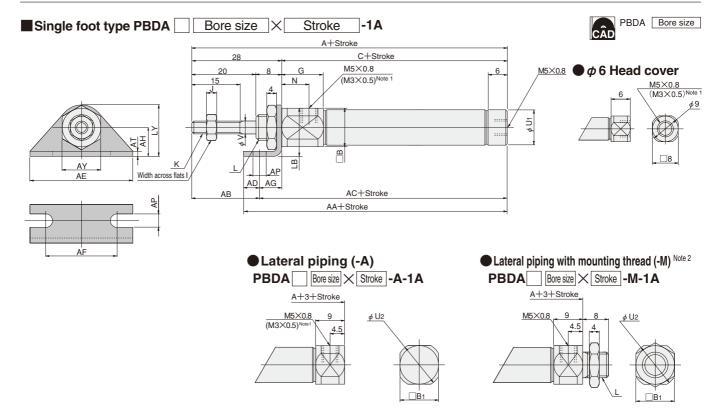

2. Not available for bore size ϕ 6.

ϕ 2.5, ϕ 4 Single Acting Push Type

Symbol

Single acting push type

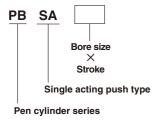

Specifications

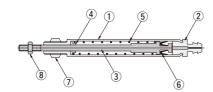

Item Bore size mm [in.]	2.5 [0.098]	4 [0.157]			
Operation type	Single actin	g push type			
Media	A	ir			
Mounting type	Basic	type			
Operating pressure range MPa [psi.]	0.34~0.7	[49~102]			
Proof pressure MPa [psi.]	1.05	[152]			
Operating temperature range °C [°F]	0~60 [32~140]				
Operating speed range mm/s [in./sec.]	50~300 [2 In applications with high loc externally mounted stoppe	2.0~11.8] ad ratio or high speed, use) rs.			
Cushion	No	ne			
Lubrication	Not re	quired			
Minimum operating pressure MPa [psi.]	0.34	[49]			
Port size	ϕ 4 \times Barb fitting for nylon and ure with the head cover.	φ 2.5 thane tubes is equipped			

Remark: Cylinders with bore size ϕ 2.5 are sold in packs of 5.

Order Code

Inner Construction (cannot be disassembled)

Major Parts and Materials

	1	
No.	Parts	Materials
1)	Rod cover	Brass (nickel plated)
2	Head cover	Brass (nickel plated)
3	Piston rod	Stainless steel
4	Spring holder	Stainless steel
(5)	Spring	Steel
6	Piston seal	Synthetic rubber (NBR)
7	Mounting nut	Brass (nickel plated)
8	Rod end nut Note	Brass (nickel plated)

Note: For bore size ϕ 4 only. Not available for bore size ϕ 2.5.

Bore Size and Stroke

				mm [in.]
Operation type	Bore size	Standard strokes ^{Note}	Maximum available stroke	Stroke tolerance
Single acting	2.5	5, 10	10	+1.2 [+0.047]
push type	4	5, 10, 15, 20	20	+1.2 [+0.047] -0.2 [-0.008]

Note: Because collars are used for non-standard strokes, use the figures for the length one size up from the non-standard stroke.

Single Acting Type Spring Return Force

Handling Instructions and Precautions (Non-rotating Cylinders)

1. To mount the cylinder body in place, first secure the rod cover, and then tighten the mounting nuts to the recommended torque shown below.

Bore size mm [in.]	Recommended tightening torque N·cm [in·lbf]
10 [0.394]	600 [53]
16 [0.630]	1200 [106]

- 2. For non-rotating cylinders, avoid applying rotation torque to the piston rod. The bushing section will become deformed and non-rotating accuracy will deteriorate.
- **3.** For single acting cylinders, avoid applying loads while returning by spring force. Spring inside the cylinder could not make return the carrying work to the end of stroke.

Cushion	None	Fixed type (Ru	ubber bumper)
Port size		M5×0.8	

- Notes: 1. The low hydraulic cylinder is recommended to be used with oil on both sides. The use of oil on one side and air on the other side could result in imprecise speed control, and oil could leak across to the air side. In addition, use meter-out control for the speed control.
 - 2. Do not use nonflammable hydraulic fluid, machine oil, or spindle
 - 3. Be aware that changes in oil temperature can alter the speed.
 - 4. When using the reed switch type sensor, maintain a minimum speed of 30mm/s [1.2in./sec.] or more.

Note: For the double foot (-1), add double the mass of the single foot bracket. Remark: Includes mounting nut and rod end nut.

Calculation example: The mass for 2 units of ZC253A, with a double acting cylinder with magnet with single foot bracket, bore size of 10mm, and stroke 1 of 15mm and stroke 2 of 15mm, is

 $34+2+7+3.5+3.5+20 \times 2 = 90g [3.17oz.]$

Operation of Tandem Cylinders

Tandem Cylinders are a set of 2 cylinders joined end to end. It can be used as a 2-stage stroke cylinder by supplying air to either Port A or Port B. It can also obtain twice the thrust within the "stroke 1" range.

The rods retract strokes 2 and 1 when air is supplied from Port ©.

The rod moves stroke 1 when air is supplied from Port (A).

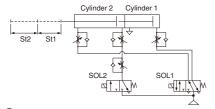

The rod moves stroke 2 when air is supplied from Port ®.

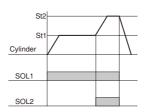

Twice the thrust is obtained within the stroke 1 range when air is supplied from Ports (A) and (B).

Example of Air Circuit for Tandem Cylinders

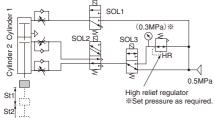

See the following air circuit when using the tandem cylinder as a 2-stage stroke cylinder.

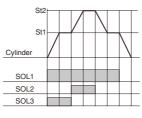

For upward-operation cylinder

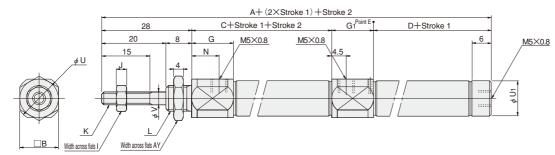

For downward- or horizontal-operation cylinder

Remark: Includes mounting nut and rod end nut. The clevis mounting type does not include mounting nut.

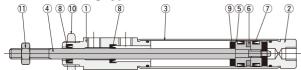

For the mass of the double foot bracket, add double the mass of the single foot bracket listed above.

Notes: 1. With supporting bracket and pin.

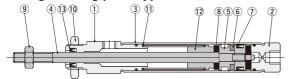

2. Same for all sensor switch models (ZC253, ZC230, ZC201, ZC205).

Calculation example: The mass for 2 units of ZC253A, with a double acting cylinder with magnet with single foot bracket, bore size of 10mm, and stroke of 45mm, is 36+7+1+40=84g [2.96oz.].

Major Parts and Materials

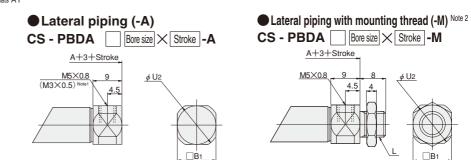

No.	Parts	Materials
1	Rod cover	Aloneiaone allan (rial alata di)
2	Head cover	Aluminum alloy (nickel plated)
3	Cylinder tube	Stainless steel
4	Piston rod	Stamess steel
5	Piston	Aluminum alloy
6	Magnet Note	Plastic magnet
7	Piston seal	
8	Rod seal	Synthetic rubber (NBR)
9	Bumper	
10	Mounting nut	Mild steel (siekel sleted)
11)	Rod end nut	Mild steel (nickel plated)

Note: For cylinders with magnets. Standard cylinders do not have a built-in magnet for the sensor switch.

No.	Parts	Materials
1	Rod cover	Aluminum allau (niakal platad)
2	Head cover	Aluminum alloy (nickel plated)
3	Cylinder tube	Stainless steel
4	Piston rod	Stairliess steel
(5)	Piston	Aluminum alloy
6	Magnet Note1	Plastic magnet
7	Piston seal	Synthetic rubber (NBR)
8	Bumper	Synthetic rubber (NBN)
9	Rod end nut	Mild atacl (pickel plated)
10	Mounting nut	Mild steel (nickel plated)
1	Spring	Steel
12	Collar	Aluminum alloy
13	Rod seal	Synthetic rubber (NBR)

Note: For cylinders with magnets. Standard cylinders do not have a built-in magnet for the sensor switch.

SENSOR SWITCHES

Solid State Type, Reed Switch Type

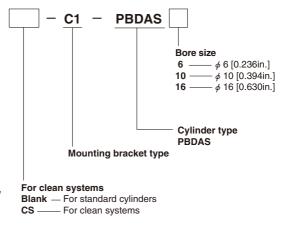

Symbol

Order Codes for Sensor Switches

Sensor switches (with mounting band)

Mounting band only

For clean systems

Blank — For standard cylinders

CS — For clean systems

● For details of sensor switches, see p.1544.

Minimum Cylinder Strokes When Mounting Sensor Switches

Depending on the sensor switch type and quantity, as well as on the mounting position, the minimum cylinder strokes that allow sensor switch mounting are shown below.

Two pieces mounting

When mounted in-line

When mounted in staggered positions

			mm	
Sensor switch model	2 pcs. m	nounting	1 no mounting	
Oction Switch model	Along a straight line	In staggered positions	1 pc. mounting	
ZC230□, ZC253□	_, ZC253		F	
ZC201 □, ZC205 □	30	10	ິ	

One piece mounting

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

Operating range: ℓ

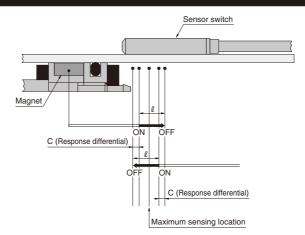

The distance the piston travels in one direction, while the switch is in the ON position.

Response differential: C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

Bore size	Bore size ZC230□,		ZC201 □,	ZC205
Dore Size	Operating range	Response differential	Operating range	Response differential
6 [0.236]	1.5~2.5 [0.059~0.098]	0.3 [0.012] or less	4~6 [0.157~0.236]	1.4 [0.055] or less
10 [0.394]	2.0~3.0 [0.079~0.118]	0.3 [0.012] or less	4~6 [0.157~0.236]	1.5 [0.059] or less
16 [0.630]	2.5~3.5 [0.098~0.138]	0.3 [0.012] or less	5~7 [0.197~0.276]	1.8 [0.071] or less

Note: The operating range and response differential are to be used as reference values.

Mounting Location of End of Stroke Detection Sensor Switch

When the sensor switch is mounted in the location shown in the diagram (figures in the table are reference values), the magnet comes to the sensor switch's maximum sensing location at the end of the stroke.

ZC205	Α	0	1 [0.039]
ZC205	В	3 [0.118]	4 [0.157]

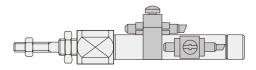

Note: For ϕ 10, always mount so that the indicator lamp is on the cover side and the lead wires are on the inner side, as shown in the diagram.

Mounting Sensor Switch by Strokes

●5mm stroke

●10mm stroke

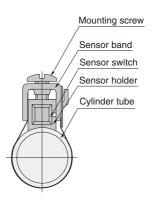

Position of sensor holder, and how to adjust it

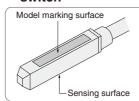

- ●The sensor holder cannot be installed at the center of the sensor switch when mounting 2 sensor switches on a 5mm stroke cylinder.
- When mounting 2 sensor switches on a 5mm stroke cylinder, loosen the mounting screw and move the sensor switch until the sensor holder is in the position shown in the diagram, and install it in the specified position.
- For 10mm strokes or more, install the sensor holder so that it is approximately in the center of the sensor switch, as shown in the diagram.

Moving Sensor Switch

- Loosening the mounting screw allows the sensor switch to be moved either along the axial or circumference direction of the cylinder
- When making fine adjustments of the sensor switch along the axial direction, a very slight loosening of the mounting screw (about onehalf turn) is enough to allow the sensor switch to be moved.
- ■Tighten the mounting screw with a tightening torque of 0.3N·m [2.7in·lbf] or less.

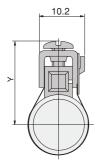

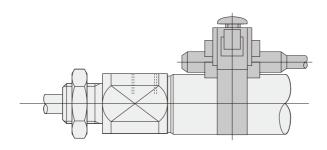

Caution when installing cylinder with sensor switch

In the ZC type sensor switches, the opposite side from the model marking surface is the sensing surface side. Mount it so that the cylinder magnet comes to the sensing surface side.
