## Control & Safety Switches

# Control and Safety Switches

Since 1984, Altech Corporation has grown to become a leading supplier of automation and industrial control components. Headquartered in Flemington, NJ, Altech has an experienced staff of engineering, manufacturing and sales personnel to provide the highest quality products with superior service. This is the Altech Commitment!

With the Bernstein line of safety products, Altech offers electrical and electronic switching, sensing and enclosure systems. The 25,000 switch, sensor and enclosure products are high quality, durable and innovative.

Our well trained technical experts welcome the opportunity to answer your technical questions and provide solutions to your automation and control needs. Give us a call or visit [www.altechcorp.com](http://www.altechcorp.com).

## *Quality Commitment*

Altech's control components meet diverse national and international standards such as UL, NEC, CSA, IEC, VDE and more. Altech provides superior customer service and delivery through Total Quality Management and Continuous Process Improvement. Altech is ISO 9001 approved. We perform these services with honesty and integrity and are committed to achieve these goals.

# Switch Systems

## Switches are an integral part of modern processes

The primary purpose of a switch is to convert mechanical movement into electrical signals that are processed in machine and control systems.

BERNSTEIN switches are configured by combining different types of enclosures, switch systems and actuators. Depending on the environmental and operating conditions, the switches are available in a metal or plastic enclosures.

The switching system is selected based on the function (slow-action or snap-action contact) and the required contact configuration. The actuator is also selected corresponding to the type and direction of actuation. Thanks to the large number of possible combinations, the scope of applications is considerable.

The applications in which limit switches are used have changed in line with increasing automation. Not too long ago limit switches were mainly used for monitoring position, today they also often assume a safety function.

Switches directly connected to bus systems are also becoming increasingly popular in modern applications where mechanical movement is converted into digital information.

## Switch systems – Economy meets safety

BERNSTEIN AG is an established manufacturer of high quality electromechanical low voltage switching devices. Our products are used in a large variety of applications, including the elevator, wood-working, packaging, food processing, metal and machine tool industries.

In addition to functional reliability and high quality, BERNSTEIN switch systems also efficiently save time in terms of installation and maintenance. These advantages further enhance the benefits of the end products as they drastically reduce downtimes for servicing and maintenance purposes.

Products like the active ASI bus interface components in, addition to shortening installation times, also reduce the number of hardware components and space requirement in machines.

## C2 Series

### Recommended use

Ideal for safety applications and position monitoring in confined spaces.

### Product advantages

- Miniature switch for safety applications
- Two-channel safety monitoring possible
- With captive snap-on cover
- Small hysteresis in snap action system

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC / 1NO, 2 NC, 2 NO
- All NC contacts with  $\ominus$  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)

### Mounting

- Also suitable for front mounting (depending on type)

- a) 2 round holes for M4 screws
- b) 2 Integrated nuts for front mounting for M3 screws (depending on type)

### Installation advantages

- Snap-on cover can be released with screwdriver
- Cover opening range 180° (cover can also be detached from hinge)
- Cover protects switching element during installation
- Screw connections with clamping plates
- Transparent cover for adjustment and visual inspection
- Easy to install cover lock (close and press)

### Technical data

Electrical data		
Rated insulation voltage	$U_i$ max.	240 V AC
Conventional thermal current	$I_{the}$	10 A
Rated operating voltage	$U_e$ max.	240 V
Utilization category	$U_e/I_e$	AC-15, $U_e/I_e$ 240 V/3 A
Short-circuit protection		Fuse 6 A gL/gG
Protection class		II, Insulated
Mechanical data		
Enclosure material		Thermoplastic, glass fiber-reinforced (UL 94-V0)
Ambient temperature		-30 °C to +80 °C
Mechanical service life		$3 \times 10^6$ switching cycles
B10d		6 Mio.
Switching frequency		$\leq 100$ /min
Type of connection		Screw connections
Conductor cross sections		Single-wire 0.5 – 1.5 mm <sup>2</sup> or Stranded wire with ferrule 0.5 – 1.5 mm <sup>2</sup>
Cable entry		Rectangle 8.5 x 3.5 mm
Protection class		IP20 conforming to EN 60529; DIN VDE 0470 T1

**Special features / variants**

- Actuator length adjustable with threaded screw

*Drawing dimensions in mm*

**Ti2 Series**

**Recommended use**

Ideal for safety applications and position monitoring in confined spaces with an IP65 protection rating.

**Product advantages**

- Compact IP65 switch for safety applications
- Optimized size with a tried-and-tested connection system
- Two-channel safety monitoring possible
- With captive snap-on cover
- 2 mm contact opening width of slow-action system conforming to EN 81-1 for lift construction
- Small hysteresis in snap action system
- Actuator can be repositioned by 4 x 90°

**Options**

- Available with M12 connector
- AS interface variants available
- Preassembled with customer-specific cables and connectors on request

**Design layout**

- Slow-action and snap-action contacts
- Versions: 1 NC/1NO, 2 NC, 2 NO
- All NC contacts with in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated change-over contact)

**Mounting**

- Mounting dimensions conforming to DIN EN 50047
- 2 slots for adjustment with M4 screws (distance between centers 22 mm)

- Fixed positioning for safety applications with two M5 screws (distance between centers 23 mm)

**Installation advantages**

- Snap-on cover can be released with screwdriver
- Cover protects switching element during installation
- Screw connections with clamping plates
- Transparent cover for adjustment and visual inspection
- Easy to install cover lock (close and press)

## IF Series

### Recommended use

Ideal for installation in confined areas where a high protection rating is required. With 6 1/2 foot molded cable, this series is rated to IP67. Suitable for position monitoring and safety applications, the slim design allows these switches to be installed in a wide range of applications.

### Product advantages

- Slim line design
- With 6 1/2' (2 Meter) cable or AMP4 connector
- High quality plastic enclosure
- Metal actuator and mounting clip
- Small hysteresis in snap action system
- Actuator can be repositioned by 4 x 90°
- Compact IP67 switch for safety applications
- Two-channel safety monitoring possible
- Other cable lengths available on request

### Options

- Various cable lengths available on request
- Can be preassembled with customized connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC/1NO, 2 NC, 2 NO
- All NC contacts with  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)

### Mounting

- Two M4 screws for adjustment with slots
- Two M5 screws for safety applications; front mounting depending on type

## I88 Series

### Recommended use

Due to its compact size and wide range of actuators and contacts the I88 series is our most popular line of limit switches. Suitable for a huge range of applications, including safety and position monitoring, these switches offer an IP65 protection rating.

### Product advantages

- Standard switch conforming to DIN EN 50047
- Standard actuator conforming to DIN EN 50047, Type A, B, C, E
- Protection class IP65 to VDE 0470 T1
- Enclosure and cover PA 6, self-extinguishing (UL-94-V0)
- Actuator can be repositioned by 4 x 90°
- Cable entry M20 x 1.5
- Connection designation conforming to DIN EN 50013

### Options

- Available with M12 connector
- AS interface variants available
- Cable entry M16 x 1.5

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC/1NO, 2 NC, 2 NO, overlapping contacts
- All NC contacts with  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)
- Latching function on request

### Mounting

- Two M4 screws (distance between centers 22 mm), adjustment with slots
- Two M5 screws for safety applications without additional fixing element (Fig. 1)
- Additionally secured by guide plate for lateral approach forces
- Front mounting (depending on type)

### Installation advantages

- Snap-on cover can be released with screwdriver
- Cover opening range 135° (cover can also be detached from hinge)
- Cover protects switching element during installation
- Screw connections with self-lifting clamping plates
- Easy to install cover lock (close and press)
- Cover can be additionally secured with screw

Fig. 1

### Technical data

Electrical data	
Rated insulation voltage	U <sub>i</sub> max. 250 V AC
Conventional thermal current (up to) <sup>1</sup>	I <sub>th</sub> 10 A
Rated operating voltage	U <sub>e</sub> max. 240 V
Utilization category (up to) <sup>1</sup>	AC-15, U <sub>e</sub> /I <sub>e</sub> 240 V/3 A
Short-circuit protection (up to) <sup>1</sup>	Fuse 10 A gL/gG
Protection class	II, Insulated
Mechanical data	
Enclosure material	Thermoplastic, glass fibre-reinforced (UL 94-V0)
Ambient temperature	-30 °C to +80 °C
Mechanical service life (up to) <sup>1</sup>	10 x 10 <sup>6</sup> switching cycles
B10d (up to) <sup>1</sup>	20 Mio.
Switching frequency	≤ 100/min.
Type of connection	Screw connections
Conductor cross sections	Single-wire 0.5 - 1.5 mm <sup>2</sup> or Stranded wire with ferrule 0.5 - 1.5 mm <sup>2</sup>
Cable entry	1 x M20 x 1,5
Standards	
VDE 0660 T100, DIN EN 60947-1, IEC 60947-1	
VDE 0660 T200, DIN EN 60947-5-1, IEC 60947-5-1

## SGS Switches

The SGS is a latching safety switch with remote release ability. Once switched, the SGS remains in this position until it is manually reset at the plunger or via an external button. A built-in solenoid actuator controls the release action. In its rugged plastic housing, it represents an economically priced alternative to the BERNSTEIN GC Series with remote release.

**The SGS can be used wherever an intentional (manual or electrical) reset function is required:**

- In lift construction
- In door and gate systems
- In wind power stations or
- Wherever safety is of prime importance

By correspondingly checking the NC contacts with positive opening action, an evaluator circuit is able to disconnect the power supply to a drive controller and shut down the machine.

**SGS applications include**

- Lift pre-switching (speed limiter)
- Monitoring of emergency release function
- Machine construction applications where specific reset of the switch is required
- Use in areas difficult to access
- Remote monitoring and reset over large distances

**Features:**

- Plunger groove for manual reset
- 2 versions: 230 V AC and 24 V DC
- Reset via built-in solenoid actuator
- 3 cable outlets M20 x 1.5
- Switching functions: 2 NC contacts
- Other actuators from the standard range on request

### Product selection

Supply voltage reset 24 Volt			
Switching operation	Actuating force 3 N	Actuating force 6 N

*New switch series can be mounted in inaccessible areas and reset remotely!*

### Technical data

Electrical data	
Protection class	II, Insulated
Switching elements	
Rated insulation voltage	$U_i$ 250 V AC
Thermal current	$I_{the}$ 10 A
Utilization category	AC-15, $U_e / I_e$ 240 V / 3 A DC-13, $U_e / I_e$ 250 V / 0.27 A
Minimum switching voltage	24 V
Minimum switching current	5 mA
Positive opening	p conforming IEC/EN 60947-5-1, Addendum K
Short-circuit protection	Fuse 4 A gL/gG
Electromagnet	
Thermal class	B (130 °C)
Rated operating voltage	$U_e$ 24 V DC / 230 V AC (depending on type)
Rated operating current	$I_e$ 2.3 A / 0.23 A AC
Duty factor	ED 3 %
Minimum ON time	$T_i$ 0.2 s
Maximum ON time	$T_e$ 0.5 s
Minimum OFF time	$T_p$ 17 s
Mechanical data	
Enclosure	Glass fibre-reinforced thermoplastic, self-extinguishing
Cover	Glass fibre-reinforced thermoplastic, self-extinguishing
Actuation	Plunger (thermoplastic)
Approach speed	$V_{max}$ 0.5 m/s
Ambient temperature	-25 °C bis +50 °C
Contact type	2 NC contacts (Zb) / NC contacts, 1 NO contacts (Zb)
Switching principle	Snap action system, bistable
Mechanical service life	5 x 10 <sup>4</sup> switching cycles
B10d	0,1 Mio.
Bolt	2 x M4 / 2 x M5 for safety applications
Type of connection Switching element	Screw connections
Conductor cross sections	Single-wire 0.5 ... 1.5 mm <sup>2</sup>
Type of connection Electromagnet	2 x butt connector similar to DIN 46341 (crushing zone 0,5 – 1,5 mm <sup>2</sup> )
Cable entry	3 x M20x1,5
Installation position	Any
Contact opening	4 x >2 mm
Protection class	IP65 conforming to IEC/EN 60529
Standards	
VDE 0660 T100, DIN EN 60947-1, IEC 60947-1 VDE 0660 T200, DIN EN 60947-5-1, IEC 60947-5-1 DIN EN 81-1

## Bi2 Series

### Recommended use

Multiple slotted mounting holes allow this series to be used as a replacement in a variety of applications. These switches can be adjusted vertically when mounted with M4 bolts. M5 bolts can be used for fixed mounting for Safety applications. Thanks to its two cable entries, this switch is ideal for use in series-connections.

### Product advantages

- Protection class IP65 to VDE 0470 T1
- Enclosure and cover PA 6, self-extinguishing (UL-94 V0)
- Actuator can be repositioned by 4 x 90°
- Cable entry 2x M16 x 1.5
- Connection designation conforming to DIN EN 50013

### Options

- Available with M12 connector
- AS interface variants available
- Preassembled with customer-specific cables and connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC/1NO, 2 NC
- All NC contacts with  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)

### Mounting

- Two M4 adjustment slots (distance between centers 22 mm)
- Two M4 adjustment slots (distance between centers 42 mm)
- Two M5 holes (distance between centers 21 mm) for safety applications
- Two M5 holes (distance between centers 41 mm) for safety applications without additional securing element

### Installation advantages

- Cover opening range 135° (cover can also be detached from hinge)
- Screw connections with self-lifting clamping plates
- Easy-action cover lock (close and press)
- Cover additionally secured with screw
- 2 cable entries for through-wiring

## ENK Series

### Recommended use

Thanks to its standard size design and its metal actuators, the ENK limit switch is particularly suitable for applications requiring a sturdy switch made of plastic.

### Product advantages

- Standard switch conforming to DIN EN 50041
- Standard actuator conforming to DIN EN 50041, Type A, B, C, D
- Protection class IP65 to VDE 0470 T1
- Enclosure and cover PA 6, (UL-94-V0)
- Actuator can be repositioned by 4 x 90°
- Cable entry M20 x 1.5
- Connection designation conforming to DIN EN 50013
- Metal actuators for high loads

### Options

- Available with M12 connector
- AS interface variants available
- Preassembled with customer-specific cables and connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC/1NO, 2 NC, 3 NC, overlapping contacts
- Latching function on request
- All NC contacts with  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)

### Mounting

- 2 adjustment slots for M5 screws
- 2 holes for M5 mounting screws in safety applications

### Installation advantages

- Snap-on cover can be released with screwdriver
- Cover opening range 150° (cover can also be detached from hinge)
- Cover protects switching element during installation
- Screw connections with self-lifting clamping plates
- Easy to install cover lock (close and press)

## GC Series

### Recommended use

Thanks to its compact design, this metal-enclosed switch is ideally suited for safety and position monitoring applications.

### Product advantages

- Protection class IP65 to VDE 0470 T1
- Enclosure: Aluminum pressure die-casting
- Cover: Sheet aluminum
- Actuator can be repositioned by 4 x 90°
- Cable entry M20 x 1.5
- Connection designation conforming to DIN EN 50013
- Metal actuators for high loads
- Graduated adjustment of AH lever
- Selectable direction-dependent contact-making of AH actuator (basic setting: contact-making both sides)

### Options

- AS interface versions on request
- Preassembled with customer-specific cables and connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC/1NO, 2 NC/2 NO, 2 NC, overlapping contacts
- All NC contacts marked with  symbol in the circuit diagram are positively opening
- Type: Zb (galvanically isolated changeover contact)
- Latching function on request

### Mounting

- 2 adjustment slots for M4 screws (for safety applications with blind hole for  $\varnothing$  4.0 mm fitted pin in enclosure base or enclosure with holes for M5)

### Installation advantages

- Screw connections with clamping plates
- Captive cover screws
- Easy-to-change switching system thanks to snap-in retainer
- Finely adjustable switching point with adjusting screw

### Technical data

## SN2 Series

### Recommended use

With its three cable entries and large connection area, the SN2 limit switch is an ideal solution for series-wiring or branch circuits. The rugged metal body is designed to provide safety or position monitoring in harsh environments.

### Product advantages

- Protection class IP65 to VDE 0470 T1
- Enclosure: Aluminum pressure die-casting
- Cover: Sheet aluminum
- Actuator can be repositioned by 4 x 90°
- Cable entry 3x M20 x 1.5
- Connection designation conforming to DIN EN 50013
- Metal actuators for high loads
- Graduated adjustment of AH lever
- Selectable direction-dependent contact-making of AH actuator (basic setting: contact-making both sides)

### Options

- AS interface versions on request
- Preassembled with customer-specific cables and connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC / 1NO, 2 NC
- All NC contacts with  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)
- Latching function on request

### Mounting

- 2 adjustment slots for M5 screws
- 2 addition holes for M5 mounting screws in safety applications

### Installation advantages

- 3 cable entries for through-wiring
- Large internal connection space
- Screw connections with clamping plates
- Easy-to-change switching system thanks to snap-in retainer
- Finely adjustable switching point with adjusting screw

## ENM2 Series

### Recommended use

With its standard enclosure size, the ENM2 limit switch is a perfect series for use in industrial and safety applications, where a rugged and durable switch is required.

### Product advantages

- Standard switch conforming to DIN EN 50041
- Standard actuator conforming to DIN EN 50041, Type A, B, C, D
- Protection class IP65 to VDE 0470 T1
- Enclosure: Aluminum pressure die-casting
- Cover: Sheet aluminum
- Actuator can be repositioned by 4 x 90°
- Cable entry M20 x 1.5
- Connection designation conforming to DIN EN 50013
- Metal actuators for high loads

### Options

- AS interface versions on request
- Preassembled with customer-specific cables and connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC /1NO, 2 NC, overlapping contacts
- All NC contacts with  $\ominus$  in the circuit diagram are positively opening contacts
- Type: Zb (galvanically isolated changeover contact)

### Mounting

- Two M5 adjustment screws with slots
- Two M5 screws for safety applications without additional securing element

### Installation advantages

- Screw connections with self-lifting clamping plates
- Easy-to-change switching system thanks to snap-in retainer (depending on type)
- Finely adjustable switching point with adjusting screw
- Captive cover screws
- Enlarged connection space
- Earthing surface on same level as switching system

## D Series

### Recommended use

Heavy duty switch body for designed for harsh operating conditions with very sturdy actuators and switching systems.

### Product advantages

- Protection class IP65 to VDE 0470 T1
- Enclosure: Aluminum pressure die-casting
- Cover: Sheet aluminum
- Actuator can be repositioned by 4 x 90° (depending on type)
- Cable entries 2 x M20 x 1.5
- Connection designation conforming to DIN EN 50013
- Sturdy contacts
- Hard wearing guide bushes

### Options

- AS interface versions on request
- Preassembled with customer-specific cables and connectors on request

### Design layout

- Slow-action and snap-action contacts
- Versions: 1 NC / 1NO, 2 NC, 2 NO, 3 NC, 3 NO, overlapping contacts
- All NC contacts with  $\ominus$  in the circuit diagram are positively opening contacts
- Latching function on request

### Mounting

- 4 slots for M5 screws

### Installation advantages

- 2 cable entries for through-wiring
- Large internal connection space
- Captive cover screws

## SKT Series - Small Plastic Body

Safety switches with separate actuators provide a fail safe switch function, indicating the position of guarding access points. For use on hard guarding gates, panels and doors. The switches are typically mounted on the fixed frame of the machine. The key mounts on the door. When the door is closed the key is inserted into the switch, closing the Normally Closed Safety contacts.

BERNSTEIN AG offers various versions of these Type 2 switches. The differences and advantages of the individual switch groups are outlined in the following.

The SKT is the smallest safety switch with separate actuator. It is particularly suited for applications that require an extremely slim and short switch design. Its rotary head, two actuator openings and various switching functions underscore its versatility in extremely confined spaces.

Added to this, the SKT features other options to meet many applications requirements.

- **Integrated eject function (FE):**

The actuator requires a holding force to maintain insertion into the switch and is ejected if the door is not locked securely. This prevents the machine from starting up if the door is not locked firmly into place.

- **Actuating force up to 11.2 lbs. (50 N):**

The standard actuating force is 2.2 lbs. (10 N). Depending on the switch, an actuating force of 11.2 lbs (50 N) can also be selected. In many applications, doors need to be tightly secured to prevent them being opened unintentionally. This is achieved by means of bolts, fasteners or other latching mechanisms. The SKI safety switch should be selected for applications that require increased actuating force.

- **Hinged Actuator (MRU):**

The MRU actuator is ideally suited for applications where the installation conditions severely restrict the actuating travel or radius. It has an adjustable actuating radius in the horizontal and vertical plane.

**SKI Series - Small Plastic Body**

The SKI is a slimline safety switch with separate actuator. It is based on the popular BERNSTEIN I88 family. Its dimensions, not including the actuating head, correspond to EN 50047.

The actuating head is rotary mounted and has two actuator openings. The SKI safety switches are designed for installation in confined areas, but still offer durability and dependability. Compared to the SKT, it offers more connection space for the wiring and variants with up to three switching contacts are available.

Other advantages of this series include:

● **Integrated eject function (FE):**

The actuator requires a holding force to maintain insertion into the switch and is ejected if the door is not locked securely. This prevents the machine from starting up if the door is not locked firmly into place.

● **Actuating force up to 11.2 lbs. (50 N):**

The standard actuating force is 2.2 lbs. (10 N). Depending on the switch, an actuating force of 11.2 lbs (50 N) can also be selected. In many applications, doors need to be tightly secured to prevent them being opened unintentionally. This is achieved by means of bolts, fasteners or other latching mechanisms. The SKI safety switch should be selected for applications that require increased actuating force.

● **Hinged Actuator (MRU):**

The MRU actuator is ideally suited for applications where the installation conditions severely restrict the actuating travel or radius. It has an adjustable actuating radius in the horizontal and vertical plane.

## SKC Series - Plastic Body Industrial Format

The SKC safety switch is based on a common industrial footprint. It is 15mm shorter than the SK series. This makes it a good choice for confined installation conditions.

The SKC offers the same advantages as the SK: An industrial standard size with emphasis on safety and personal protection, variable actuator head with two actuator openings.

Other advantages include:

- **Different actuating forces:**

To meet your application needs, in addition to the standard 2.2 lbs. (10N), actuating forces of 1.1 lbs. (5N), 4.5 lbs (20N), 6.7 lbs (30N) or 11.2 lbs. (50N) are also available.

Actuating forces from 6.7 lbs. (30N) to 22.5 lbs. (100N) can be reached using an additional externally mounted bracket which as a spring loaded retaining system.

- **Anti-tamper facility:**

The actuation system requires a multiple stepped initiation process which cannot be reset if tampered with.

- **Outstanding handling:**

With the two slots you can easily adjust the SKC safety switch and lock it in position by means of the two holes accessible from the top or the two holes accessible from the front. The switch can be wired from three different sides. A transparent cover prevents foreign particles from entering the contact space while connecting the power supply cable.

## ENK Series - Plastic Body Industrial Format

These keyed operated safety interlock switches from the ENK series correspond to Type 2.

This means that you can use Type 1 and Type 2 position switches corresponding from one series of switches for all your applications.

This results in many advantages:

- **Standardization:**

Switches of one family have the same mounting dimensions and the same electrical properties.

- **Reduced costs:**

The ENK series are used in large quantities. This not only reflects the quality of the products but also means lower prices compared to special designs used in small quantities.

### Variable VTU head

Repositioning the actuator head either in horizontal or vertical direction results in 8 approach actuator directions.

## SLK - SLM Series

Machines that continue running after being switched off are often part of automated production processes. Safety guards prevent operator access and must therefore be kept closed until the hazards posed by machine movement have ceased.

Solenoid Locking Safety Switches are designed to lock the actuating key in the switch, ensuring that safety gates, safety doors and other protective guards remain closed for as long as a hazardous situation exists.

In production processes safety position switches have three main tasks:

- Enabling the machine/process when the safety guard is closed and interlocked
- Disabling the machine/process when the safety guard is opened
- Position monitoring of the safety guard and interlock

The SLK/SLM safety position switches with separate actuators and locking solenoid conforming to EN 1088, EN ISO 12100-1, 12100-2 and since 12/29/2009 to the compulsory Machinery Directive 2006/42/EC.

### System description

SLK/SLM safety position switches with locking function are available with spring force locking (normally locked) or magnetic force locking (normally unlocked).

#### Normally Locked (Spring Force Locked)

With the Normally Locked Versions (F) the actuator key is locked in the switch as soon as it is inserted and requires voltage to be applied to the solenoid in order to remove the key from the switch.

These versions are usually available with a manual override that allow the key to be removed in the event of a power failure.

#### Normally Unlocked (Magnetic Force Locked)

The Normally Unlocked Version (M) allows the actuator key to be freely inserted and removed, until voltage is applied to the solenoid at which point the key will be locked in the switch.

In the event of a power failure the actuating key can be removed.

### Solenoid Operating Voltage

The power used to control the locking (or unlocking) solenoid is supplied to the switch with separate circuit.

Switches with solenoid operating voltages of 24VAC/DC or 110/230VAC are available.

### Typical Control Circuits

These switches are typically used in conjunction with a time delay circuit or zero speed monitor to control the voltage to the locking (or unlocking) solenoid.

### Safety Contacts

Two independent safety contact blocks are offered. One monitors the position of the key; while the other monitors the locking function.

The contacts in these blocks can be used separately or in series to create the best possible safety circuit for the application.

## SLK Series - Plastic Body

### Product advantages

- Two independent safety circuits ensure reliable integration
  - With two contacts, circuit 1 monitors the actuator
  - With two contacts, circuit 2 monitors the locking function

The contact configuration is variable and may deviate from the selection table if required.
- Two different operating voltages for universal integration::
  - 24 V AC / DC
  - 110 V / 230 V AC
- Rotary actuating head (4x 90°) as well as horizontal and vertical actuation ensure complete flexibility in use
- Compact design with short overall size of only 170 mm
- Innovative installation with spring-loaded terminals
- Function conforming to GS ET 19, EN 60 204-1, EN 60 947-1 and EN 60 947-5-1

The actuator is not included and must be ordered separately.

### Safe operation

The stainless steel actuator ensures safe and reliable operation. Its keyed operation reduces tampering and bypassing the system. The radius actuator is ideal for monitoring smaller safety hinged gates. It can be preset horizontally or vertically and is also made from stainless steel.

### Innovative installation

The SLK is electrically connected safely and reliably by means of spring loaded terminals. Connection wires can be terminated without the need for tools.

### High Protection Rating

The SLK series has a Protection Rating of IP67, making it suitable for tough environments.

### Multiple Cable Entry Knockouts

This series features three M20 cable entry knockouts, which facilitate single, series or branch wiring.

### Vertical Housing

The vertically designed housing is ideal for use with extruded rail hard guarding.

### Flexible in use

The SLK safety switch can be actuated in horizontal and vertical direction. Prior to installation it is preset by simply repositioning the head section. This flexibility in installation is achieved by positioning the actuator head in steps of 4 x 90°.

**IMPORTANT: The actuator for the SLK must be ordered separately. You will find a corresponding overview at the end.**

## SLM Series - Metal Body

### Product advantages

- Highly resistant in harsh industrial environments, with compact enclosure for space-saving installation
- Triple-keyed actuator with high anti-tamper security
- Approach direction of actuator easily changed in 90° steps (repositioning only possible with actuator inserted)
- Internally encapsulated construction; rated IP67
- Separate connection compartment for safe wiring at contact strip
- Two independent safety circuits ensure reliable integration
  - With two contacts, circuit 1 monitors the actuator
  - With two contacts, circuit 2 monitors the interlock
  - The contact configuration is variable and may deviate from the selection table if required
- Integrated protective circuit avoids polarity reversal and voltage spikes
- Function conforming to VDE 0660 Part 200, EN 60 947-5-1 and GS ET 19
- The SLM safety switches are supplied as standard with actuator A1

### Options

- Individual contact configuration
- Radius actuator for actuating radii of less than 400 mm
- Auxiliary release
- Two independent safety circuits ensure reliable integration
- Solutions to customer specifications

## SHS3 Series

- **Easy to install and tamper-resistant** - the switch mechanism is safely integrated in the hinge
- **No actuator** - no alignment necessary since the actuator is an integral part of the switch
- **No mechanical deterioration** - due to the actuator free switching
- **Reliably operating** - there is no alignment issues between the switch and actuator
- **Tamper-resistant** - the hinged switch can not be defeated with an extra actuator

### New Design With Fine Adjustment

The new SHS3 series offers the next generation of hinged safety switch development. It is now unnecessary to replace switches when misalignment of safety doors or gates may occur due to mechanical stress created by accidents or instability. The SHS3 features a fine adjustment system that allows the trip point to be fine tuned to correct for changes to the door or gate, even after the switching point has been set.

### Reusable

The SHS3 can be reused even when the entire system needs to be converted: With the aid of a change kit, the user can redefine the switching point without effecting the protection rating of IP67.

### Safe:

With suitable system layout, the switch can be used up to performance level PL<sub>e</sub>. Following variants are available:

- 2 positive opening safety contacts
- 2 positive opening safety contacts with additional normally-open signaling contact
- With integrated AS interface Safety at Work.

### Greater Application Range

The SHS3 has a swivel range from 0° to 270°. The switching point is also freely selectable. The SHS3 hinge switch has virtually no limits in terms of its installation flexibility. Not only does the SHS3 enable front and interior installation, right-hinged or left-hinged mounting or freely selectable direction of electric connection, but thanks to the switching point which can be set in an angle range of 270°, this hinge switch can also be installed in places that were previously not possible.

### Flexible:

- Freely and repeatedly adjustable switching point
- Switching point freely adjustable by user over a range of 270°
- Uncomplicated re-adjustment even of set switching point by  $\pm 1.5^\circ$  thanks to integrated fine adjustment system
- Slots for mounting on sections and welded structures
- In addition to the plug connection version, an SHS3 with fixed cable connection at the back is also available
- Right and left hinged systems possible for optimum cable routing
- Mounting between sections while maintaining the required finger guard gap

### Fast:

To connect the SHS3 even more efficiently, the two contacts are designed as normally-closed contacts with Ultra-Lock technology, thus enabling connection with an M12 cable.

### Reliable:

- The protection rating is IP67
- The load-bearing hinge is made from stainless steel while the switching system is housed in a high quality plastic enclosure

**SHS3 Series**

On delivery, the SHS3 hinge switch allows for all possible settings. With your specific application you define and lock the safe status of the hinged safety equipment (the closed position) (Fig. 1).

The adjusting screw located in axial direction in the switching system is then tightened with the special bit supplied with the hinge switch. The arrangement of the adjusting screw makes it possible to adjust the switching point in all installation positions (Fig. 2+3)

After establishing a form-fit connection, a green ring in the gap between the stainless steel hinge and switch enclosure indicates that the switching point has been set correctly at a min. torque of 2 Nm/+10% (Fig. 4).

A red ring at this point additionally indicates wear, e.g. caused by abrasive substances. With the same special bit you can not only freely adjust the switching point to suit your application but you can also change the mounting arrangement of your safety equipment from right-hinged to left-hinged (Fig. 5).

**Fine adjustment**

The set switching point can be subsequently varied by up to  $\pm 1.5\%$  by turning the adjusting screw in the corresponding direction (Fig. 6).

In many cases this fine adjustment makes it unnecessary to replace the switch or readjust the switching point due to mechanical deformation of the safety guard. The switching angle should generally be selected as small as possible.

**Dimensioned drawings**

**SHS3...KA...**

**SHS3...KR...**

**Contact Information**

**U15Z**  
2 NC contacts,  
2 NO contacts (Zb)

**A2Z**  
2 NC contacts (Zb)

Setting point freely selectable in range from 0°... 270° and 0°... 180°

**Tolerances:**

- Switching angle (opening)  $\pm 1.5^\circ$
- Positive opening torque 10 %
- Positive opening angle  $\pm 1.5^\circ$

**SHS3 Double Series**

**Double hinge**

Thanks to its two switching elements on one hinge, the BG (occupational health and safety)-approved variant of the SHS3 provides two independently adjustable switching points. This arrangement not only makes it possible to monitor the opening of a safety guard but also the direction of opening of swing doors.

swivel range: 0° to 270°

- ② Position of connection variant 1, 3 and 4.

Protective hoods and safety guards on machines such as gates in safety gate systems are often pivot mounted with hinges.

BERNSTEIN presented the world's first safety hinge switch in 2002, offering the innovative SHS series, which combines a hinge and safety switch in one functional unit.

The design of the SHS safety hinge switch has been updated to work cohesively with aluminum extruded rail systems. Its shallow depth, even when fully opened, makes it ideally suited for use in tight installation conditions on machines. Safety doors and gates are often subject to high mechanical stresses, which can cause them sag, leading alignment issues with standard keyed switches. With the SHS switches the safety guards are monitored directly from the hinge.

The concealed components of the safety switch provides a high degree of protection against tampering. In addition, units with a back connection allow the cable to be completely hidden in the door frame preventing unauthorized access. The SHS hinge switch provides maximum anti-tamper protection as, once set, the switching point can no longer be changed.

**Safe:**

- 2 SHS hinge switches, each equipped with a positively opening safety contact, allows you to configure a system up to performance level PLe

**Flexible:**

- The angle range extends from 0 to 225°
- A safety device ensures positive activation after the switch has been set
- In addition to the plug connection version, an SHS with fixed cable connection from the back or pivot point is also available

**Fast:**

- Plug connector and fixed cable connections are available for axial and radial (rear) connection
- An AC/DC version (up to 250 V) or a DC version (up to 60 V) is available, depending on the configuration of the safety circuit

**Reliable:**

- A pressure die-cast zinc enclosure allows versatile use of the SHS switch in varied applications
- When used as a load bearing hinge, the SHS takes up loads of up to 750 N in axial direction and 1000 N in radial direction after the switching point has been finally set
- The protection rating is IP67

To complement the extensive range of mechanical safety switches offered by BERNSTEIN, a new series of non-contact safety switches is now available. These safety sensors ensure that safety doors and protective guards remain closed when danger is present.

**The non-contact safety technology offers the following advantages:**

- Wear-free actuating
- Very easy to clean
- No actuator, therefore:
  - No mechanical damage possible
  - No hazards or restrictions caused by protruding actuator
- Switching function not affected by contaminants

BERNSTEIN offers two different technologies in the field of non-contact safety technology:

- Safety sensors on magnetic basis, MAK series
- Safety sensors on RFID basis, CSMS series

## Safety sensors CSMS

The CSMS can be directly connected to contactors or to an evaluation unit (dependent on the respective model). The RRS version integrates an evaluation of a return circuit and start button with direct connection to contactors. With the CSMS, PL e and SIL 3 is achieved. This is the case with only one CSMS and also with series circuits with up to 32 sensors the case.

**Product features**

- Performance Level e
- Up to 32 series circuits without leaving the PL e
- Power supply 24 V DC
- High coding level corresponding to the draft DIN EN ISO 14119
- No need of any additional external monitoring (dep. on the type)
- Connection of return circuit and start button possible (dep. on the type)
- Output current up to 250 mA per safety output
- Large diagnostic possibility
- 3 LEDs for status information of the CSMS
- Switching distance: 13 mm
- Dimensions: 110 mm x 30 mm x 15 mm
- IP 67

## Safety sensors MAK

To achieve a PL or SIL value with the MAK safety sensors, it is necessary to connect them to a safety evaluation unit. The magnetic safety sensors are dual channel versions. The evaluation unit (BERNSTEIN designation: MÜZ) monitors the correct switching of the two MAK channels and a defined time window in which the two channels must switch.

With the combination of MAK and MÜZ, a PL d and a SIL 3 can be reached. Besides the 3 different types of magnetic safety switches, BERNSTEIN also offers two different evaluation units.

**Product features**

- Performance Level d
- Redundancy with NO and NC contacts
- Switching distance: 6 mm
- IP 67

**Comparison CSMS – MAK**

Product characteristics	CSMS	MAK
Operating principle	electro-magnetic, RFID	magnetic, Reed
Safety parameters	PL e, SIL3	PL d, SIL 3
Safety outputs	electrical outputs	mechanical contacts
Can be switched in series	yes, when a constant safety level is guaranteed	yes, with falling safety level
Evaluation unit required	no	yes
Actuator coding	high	low
Diagnostic interface	via LED and electronically	no
Mechanical sensitivity	low	very high
Approach possibility of the actuator	4	1
Safety outputs	2	1
Return circuit evaluation	yes	partially (depending on the evaluation unit)
Start button monitoring	yes	partially (depending on the evaluation unit)

## CSMS - Non-Contact RFID Safety System

The CSMS non-contact electrical safety switch systems ensures that safety doors and protective guards remain closed.

In addition to high switching tolerances and fast reaction times, the contactless, coded communication between the sensor and the actuator also offers a high level of safety and protection against tampering.

The use of non-contact safety switches for monitoring movable safety doors, guards and gates offers the following advantages:

- **Simple adjustment**
- **No broken actuators**
- **High degree of tolerance to vibrations**
- **No wear**
- **Exceptionally easy cleaning**
- **Unique or Multiple Coding** – with unique coding pairs only one mated actuator with can be used with each switch; multiple coding pairs allow a common actuators to be used for multiple switches
- **Safety series connection** with max. 32 CSMS up to **PL e / SIL 3 (category 4)**
- **Reduction in cost** – no additional external monitoring is needed
- **Flexible application** – a manual and automatic start is possible with the same CSMS
- **Meets the latest requirements** – the CSMS fulfils the requirements of **ISO 14119** (the successor to EN 1088) regarding individual coding (**high-level coding**)
- **Economic system installation** due to the **simple** and **fast installation** with M12 plug technology
- **Time saving** – laborious troubleshooting as a result of wiring errors is now a thing of the past
- **Time saving** – the system status is displayed on the **diagnosis interface**

### Advantages of fast shutdown:

Thanks to the fast shutdown, it is possible to significantly reduce the area of the dangerous movement which is to be protected. This results in savings in both protective guards and hoods, as well as in space.

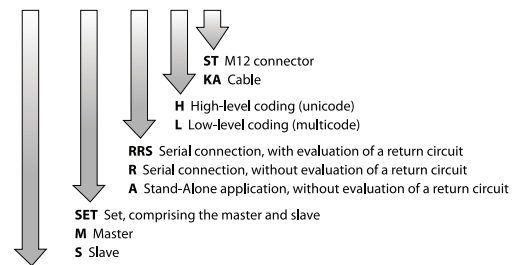

Rated sensing distance $S_n$	13 mm
Assured sensing distance – (On) $S_{so}$	min. 10 mm
Assured sensing distance – (Off) $S_{sr}$	19 mm
Hysteresis H	0,5 mm

**Please note:** Metal may also affect the sensing distance.

### Description Breakdown:

#### CSMS-SET-RRS-H-ST

CSMS Contactless Safety Monitoring Sensor

### Sensing distance

## Technical data

- Rated operating voltage 24 V, polarity reversal protection
- Open-circuit current ≤ 55 mA
- Repeatability 0,1 x S (within the limits Smin and Smax)
- Switching frequencies ≤ 1Hz
- Switch-off delay time 13 ms + 200 μs x down stream CSMS unit in serial connection
- Output current Safety contacts = 2x 250mA
- Enclosure Macromelt, red / PA 6, black
- Mounting through 2 holes Ø 4,5 (for M4 screws)
- Ambient temperature -25 °C to +70 °C
- Protection class IP 67
- Sensing distance S n 13 mm

### Readiness delay t<sub>v</sub>

- **CSMS...RRS with automatic start**  
1,8 s + 33 ms x following CSMS unit
- **CSMS...RRS with Start button**  
50 ms + 50 ms x following CSMS unit
- **CSMS...R**  
320 ms + 50 ms x following CSMS unit

## SCR ON

For processing signals from the BERNSTEIN CSMS-R and CSMS-A, the safety relay series SCR ON can be used.

### Features

- Monitoring of sensors with PNP output
- **PL e** according to ISO 13849
- Monitored start / automatic start
- Three enabling current paths (NO)
- Evaluation of a return circuit

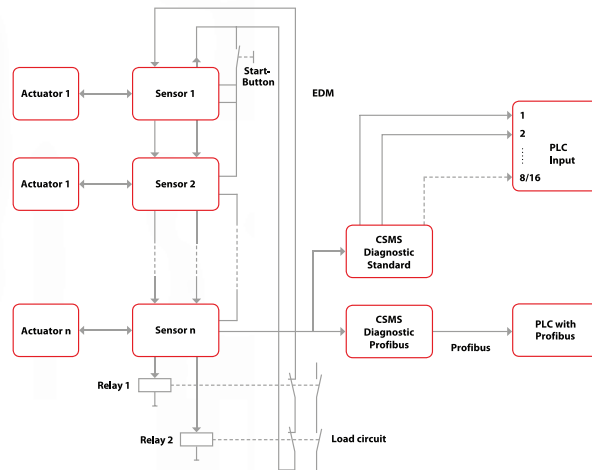

Article number	Designation
6075111020	SCR ON4-W22-3.6-S

## CSMS diagnosis

The CSMS product family offers one of the **largest diagnostic options** on the market. Opened protective gates and guards as well as failures can be rapidly and precisely identified. With the optional diagnostic devices monitor, the status of each CSMS switch can be read from the security network.

### Features

- Status display of each CSMS in the security chain
- Electronical outputs or bus interface

Article number	Designation	Description
6075989031	CSMS DIAGNOSE STANDARD 8	Diagnosis for 8 CSMS
6075989032	CSMS DIAGNOSE STANDARD 16	Diagnosis for 16 CSMS
6075989033	CSMS DIAGNOSE PROFIBUS	Profibus Gateway

## Safety basis monitor

The Safety Basis Monitor is a graphically programmable safe "miniature control unit", which supports up to 35 inputs.

### Features

- Evaluation of a return circuit
- Manual / automatic start
- Up to **PL e / SIL 3**
- Two safe electronic outputs
- Time delay for safe outputs
- Graphically programmable

Article number	Designation
6073100084	ASI BASISMONITOR EXP. FUNCTION
6073800079	ASI PROG. SOFTWARE
6073100078	USB-CA. F. ASI BASISMONITOR

## MAK - Non-Contact Magnetic Safety System

### Magnetic controllers for safety functions

BERNSTEIN offers magnetic controllers for safety functions that fulfill performance level PLd according to EN 13849-1 and SIL 3 according to EN 61508 or EN 62061.

A safety system consists of the safety magnetic controllers and a coded transducer unit.

The anti-tamper security of the transducer unit is achieved by variable coding of the actuator magnets and magnetic switches.

The safety magnetic controller processes the NC or NO contact signals coming from the coded magnetic switches. Thereby, it is possible to detect the opening of the safety guard (door, hatch, protective hood etc.) and to turn off the safety output. Thanks to the redundant evaluation, the magnetic controller is switched to the "safe state" should a fault or manipulation occur, or if the time difference is exceeded between the NC contact signal and the NO contact signal. An LED indicates that the safety magnetic controller is in the "safe state".

To ensure fault detection of the switch-off device, the MÜZ-102 offers the possibility to connect a return circuit. The system additionally features a NC contact for signaling purposes.

- Redundancy by NO and NC contacts
- Manipulation safety by coding
- Monitoring of the return circuit (depending on device type)

Depending on the type of device, one or two coded transducer units (magnetic switch with corresponding magnet) of type:

- MAK-4236
- MAK-5236
- MAK-5336

can be connected to and monitored by the safety magnetic controllers.

MAK-4236-x with magnet TK-42-CD

MAK-5236-x with magnet TK-52-CD / 2

MAK-5336-x with magnet TK-43-CD

**MUZ - Non-Contact Magnetic Switch Controllers**

- EN ISO 13849-1 Performance Level PL d
- EN 61508 and EN 62061 SIL 3
- EN 60947-5-3 Single fault security S
- TÜV certified

## Conveyor Belt Alignment Monitoring

### Metal-enclosed belt alignment switches for monitoring conveyor belts

In conveyor belt applications, the safety switch prevents conveyor belts from being damaged or being destroyed as the result of the belt running off track. When the roller lever is deflected by a conveyor belt running off track the safety contacts in the switch engage, thus shutting down the conveyor belt.

Only after eliminating the cause of the malfunction can the system be restarted by means of the pull release (key ring).

The roller lever is mounted in ball bearings. The cast iron enclosure has three M20 x 1.5 cable entries ready for through-wiring. The belt alignment switch is equipped with 2 normally-open contacts and 2 positive opening NC contacts  $p$ . Thanks to its sturdy design, the device guarantees continuous trouble-free operation even under extreme operating conditions.

## SRM and SR

SRM

SR

### General information on safety cable pull switches

The SR and SRM safety cable pull switches are designed and approved in accordance with the standards IEC 947-5-5, DIN EN 60947-5-5 and ISO 13850, which state that on actuation or in the event of cable breakage, the emergency stop switching device locks automatically and can only be reset to its initial setting by means of the resetting device on the switch.

In order for the overall system to conform to the standards EN 60947-5-5 and EN 13850 governing the emergency stop function of cable pull switches, it is necessary to integrate a spring in the system. The reasoning behind this requirement is that a person who triggers the emergency stop functions does not need to consider the activation direction. With the spring it is possible to pull the cable in the direction of the cable pull switch, thus activating the emergency stop function.

Safety cable pull switches may only be used in control power circuits. Safety cable pull switches are used on accessible sides of conveyor systems or machines. In contrast to Emergency Stop switching devices (e.g. mushroom pushbuttons) installed at intervals, where the emergency stop signal can only be generated at the device itself, with the safety cable pull switch it is possible to generate the signal at any point in a section. Depending on the type of switching device, a span of up to 75 m can be achieved with a pull cable connected to the pulling element.

The maximum possible span length of a pull cable switch is always dependent on the temperature fluctuations to which the system is exposed. It is possible that the pull cable switch may trip due to the fact that, because of its temperature coefficient, the length of the steel cable can change in response to changes in temperature. Ultimately, this change in length is dependent on the length of the cable, the difference in the temperature change and the type of springs used in the pull cable switch. Overview 1 shows which cable lengths are possible as a function of change in temperature.

### Pull cable counter-spring

With overstretch safeguard based on compression spring principle

## SRM and SR Series

### Advantages of SRM/SR safety cable pull switches:

- The SR (plastic enclosure) and SRM (metal enclosure) safety cable pull switches are available with the Quickfix quick-connect system, which eliminates the need for cable eye stiffeners, cable clamps and turnbuckles that are otherwise required for mounting the cable. Added to this, the time required to install the cable is drastically reduced. Versions with a conventional eye are, of course, also available.
- All variants of the SRM and especially of the SR are equipped with an integrated emergency stop impact button that can be actuated by pressing in hazardous situations. In the same way as pulling the pull cable, the safety contacts are opened and the switch is locked.
- The type SRM...E-... safety cable pull switches are optionally available with a remote indicator for monitoring the cable tension. This option has an integrated sensor unit that monitors situations in which the cable tension may overshoot or undershoot the permissible value or triggering of the safety

cable pull switch is imminent. This electronic output signals in advance that maintenance/adjustment is required otherwise the machine will shut down. This output can also be used for event signaling purposes or optionally available indicator lamps can be connected. This connection configuration conforms to "preventative maintenance" requirements.

- During installation/adjustment of the cable span, the correct tension of the cable can be checked through the integrated inspection window. To ensure optimum cable tension as part of the adjustment procedure, the tips of the indicator arrows should be aligned with the marking.
- A second inspection window integrated in the SRM version makes it possible to check the status of the locking function and of the contacts. Yellow in the inspection window indicates that the safety cable pull switch is locked. Green in the inspection window indicates that the cable pull switch is ready for operation and the cable assembly is monitored.

### Overview 1

	Span L max. in meters [m]																																						
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	22	24	26	28	30	32	34	36	38	40	42	44	46	48	50	55	60	65	70
Max. temperature variation in Kelvin (K)	+/- 40 K																																						
	+/- 35 K																																						
	+/- 30 K																																						
	+/- 25 K																																						
	+/- 20 K																																						
	+/- 15 K																																						
	+/- 10 K																																						
	+/- 5 K																																						
+/- 3.5 K																																							
SR...100	Max. span 25 meters																																						
SR...175/SRM...175	Max. span 37.5 meters																																						
SR...300/SRM...300	Max. span 75 meters																																						

The parameter 100, 175 and 300 in the product designation indicates the force of the springs used in the cable pull switch. It should be noted that a greater actuating force is required for higher spring forces.

**SiRK, Si1 and Si2 Series**

SiRK

Si2

Si1

BERNSTEIN double-spanned cable pull switches (SiRK, Si1 and Si2) are also used in emergency stop applications. When the cable is pulled the switching lever is deflected in the corresponding direction and the system shut down.

The switches are available in two metal versions, the Si1 and Si2, as well as an insulation-enclosed version, the SiRK.

**These types of cable pull switch are ideally suited for applications with high temperature fluctuations and long cable spans. With their sturdy enclosure, the Si1 and Si2 are the perfect switches for harsh environments.**

Two cables spanned in opposite directions are attached to the switching device. The counter-springs are secured to the wall at the ends of the cables. Provided the change in temperature is the same at all points along the cable, the springs will effectively compensate for the change in cable length.

## SiRK, Si1 and Si2

### Product selection

Designation	Max. span length
SI1-U2Z AK R-RAST	2 x 50 m
SI1-U1Z/U1Z AK R-RAST	2 x 50 m

Because of their specifications and the safety standards for application (see Cable Safety Pull Switches SRM/SR), these cable pull switches are used generally as safety command devices; switching control signals instead of the power directly.

These switches are available with metal and plastic bodies. They are operated manually by the attached cable.

Thanks to their pretension, these switches, which feature a switching contact with overlap, execute a switching function when the cable is pulled or in the event of cable breakage.

Switches with tension monitor require per-tension to the cable for the normally closed contact to close.

**The field of application for these cable pull switches includes**

- Opening and closing of (overhead) doors
- Starting machines
- Issuing commands in production processes

The basic design of the standard cable pull switches is similar to that of position switches.

The specified cable length refers to the maximum length at minimum temperature variation. The maximum cable length may decrease under different environmental conditions.

<b>3911751437</b>

Material: Steel  
Coating: Blue passivated, RoHS-compliant

### Deflection pulley ø 75 mm for cable diameter up to 8 mm

Art. No.
<b>269.0000.051</b>

Material: Steel/polyamide  
Coating: Blue passivated, RoHS-compliant

## General Information

## BERNSTEIN – For over 50 years we have developed and produced foot switches

Tailored to your applications –  
the modular foot switch concept from BERNSTEIN.

BERNSTEIN, a leader in the field of industrial foot switches, incorporates more than 50 years of experience into the development and production of it's products. The wide range of models reflects the expertise of the company offering foot switch solutions for many different applications.

Overview

## Technical data

Electrical data		
Rated insulation voltage	$U_i$	400 V AC
		250 V AC (in type designation "ZS", "EX")
Rated impulse strength	$U_{imp}$	4 kV *
		2,5 kV (in type designation "C", "ZS", "EX") *
Conventional thermal current	$I_{the}$	10 A
		5 A (in type designation "ZS", "EX")
Utilization category		AC-15, $U_e / I_e$ 240 V / 3 A
		AC-15, $U_e / I_e$ 240 V / 1,5 A (in type designation "ZS")
Positive opening		according to IEC/EN 60947-5-1, Addendum K (when reaching the pedal stop)
Over-voltage category (switch-in contact with enabling function)		III (according to IEC 60664-1)
Protection class		I

\* does not apply to "MI" and "MI RG" in article designation

Mechanical data	
Enclosure	Cast aluminum (powder-coated)
Cover, Protective shroud UN	Cast aluminum (powder-coated)
Foot pedal	Thermoplastic
Ambient temperature (with no icing / no condensation)	-30°C to +80°C (-20°C to +65°C in type designation "EX")
Storage temperature	-30°C bis +80°C (-20°C to +65°C in type designation "EX")
Mechanical service life	> 1 x 10 <sup>6</sup> switching cycles when using switches with potentiometer 5 x 10 <sup>4</sup>
Switching frequency	50 min <sup>-1</sup> when using switches with potentiometer 20 min <sup>-1</sup>
Type of connection	Screw connections (M3,5)
Conductor cross sections	Single-wire 0,5 – 1,5 mm <sup>2</sup> or stranded wire with ferrule 0,5 – 1,5 mm <sup>2</sup>
Cable entry	M20 x 1,5
Weight with cover	F1 ≈ 0,6 kg, F2 ≈ 1,7 kg, F3 ≈ 3,0 kg
Weight with protective shroud UN	F1 ≈ 1,5 kg, F2 ≈ 2,6 kg, F3 ≈ 5,4 kg
Protection class	Protection class depends on type. Standard is IP 65.

### Standard values for safety technology

<b>B10d</b>	20 x 10 <sup>6</sup>
	6 x 10 <sup>6</sup> Restrictions in article designation "C" *
	2 x 10 <sup>6</sup> Restrictions in article designation "D" *
	4 x 10 <sup>6</sup> Restrictions in article designation "EX" *
	1 x 10 <sup>5</sup> Restrictions in article designation "ZS" *

\* Once a restriction exists, the lowest value needs to be applied.

This technical data is generic to our standard foot switch range, please refer to individual technical data sheets for exact product information as the technical data above may vary.

### Standards

VDE 0660 T100, DIN EN 60947-1, IEC 60947-1  
 VDE 0660 T200, DIN EN 60947-5-1, IEC 60947-5-1

### Approvals\*

CCSAUS A300, Q300 (same polarity)  
 cULus B300 (in type designation "ZS")  
 DGUV (Only switches that have an appropriate label.)

\* Approvals depend on type.  
 More information can be found in the data sheet.

**Single Pedal Without Cover**

**STANDARD**

Standard OFF-ON Operation - Push pedal to change contact state. Release pedal to return to original state.

**STANDARD with IP67 & IP68 PROTECTION**

Standard OFF-ON Operation - Push pedal to change contact state. Release pedal to return to original state. With IP67 & IP68 Protection Rating (Temporary Submersion).

**TWO STAGE OPERATION**

Two Stage Operation- Press Pedal to change the state of the first set of contacts. Continue to press further to change the second set of contacts.

## Single Pedal Without Cover

### LATCHING

Latching Operation - Push pedal to change contact state. When you release the pedal, the contacts remain in that state. Push again to return to original state.

### ANALOG OUTPUT

Analog Output Operation - As the pedal is depress, voltage or amperage (depending on model) is increase. Features an additional programmable NP NO signaling contact that activates at a preset level.

## Enabling Foot Switch without Cover

The enable foot switch provides two enabling contacts and one signaling contact and is available with or without latch. If the pedal is pressed up to pressure point, the two enable contacts are closed. If the pedal is released, the enable contacts are open again. If the pedal is pressed past the pressure point, to the bottom position, the positive opening action enabling contacts are opened. When the pedal is released from the bottom position, the enabling contacts remain open through the center position to the top. For the application of an enable device, the rules for DIN EN ISO 12100 and DIN EN 60204-1 apply.

The programmable signaling contact can be used to indicate a fixed position, with a PNP output. By combining both outputs you can determine if the actuation position was made with the top position- the OFF position of the enable contacts (the actuator is not pressed) - or the bottom position - the OFF position of the operating contacts (the actuator is fully pressed).

## Foot Switches with Safety Lock Plus Manual Release

- **Pedal pressed up to pressure point:**  
The make contact is closed and the work process is started.
- **Pedal pressed beyond resistance of the pressure point in an emergency situation:**  
The make contact is interrupted and locked, the work process is interrupted. In this phase the lock remains in the Off position even when the pedal is not pressed. This reliably prevents uncontrolled restart of the machine or moving parts.
- **Release:**  
Only after the hazardous situation has been remedied does manual release (pushbutton on the side of the enclosure) release the contacts again and the work process can be restarted by pressing the pedal as far as the pressure point.

Safety function on foot switches with mechanical lock (SiPf)

## Foot switches for potentially explosive atmospheres

BERNSTEIN offers you a wide range of single and double pedal foot switches designed to meet the exacting requirements of zone 1 and 2 potentially explosive atmospheres (other approvals on demand). The foot switches have factory fitted connection cables which are available in different lengths.

### Ordering Instructions for foot switches in potentially explosive atmospheres:

Foot switches for potentially explosive atmospheres have "EX" in the article designation and can be delivered in one and two pedal versions.

#### Single pedal foot switch F1

Article number	Designation	Switching contacts	Special feature
609.6198.014	F1-SU1Z EX 5M	1NC / 1NO	5 m Connection cable
609.6198.015	F1-SU1Z EX 9M	1NC / 1NO	9 m Connection cable
609.6197.017	F1-SU1Z EX UN -2M-	1NC / 1NO	2 m Connection cable, Prot. shroud UN
609.6197.019	F1-SU1Z EX UN -5M-	1NC / 1NO	5 m Connection cable, Prot. shroud UN
609.6197.020	F1-SU1Z EX UN -9M-	1NC / 1NO	9 m Connection cable, Prot. shroud UN

#### Two pedal foot switch F2

Article number	Designation	Switching contacts		Special feature
		Pedal 1(left)	Pedal 2(right)	
609.6198.022	F2-SU1Z/SU1Z EX -2M-	1NC / 1NO	1NC / 1NO	2 m Connection cable
609.6198.024	F2-SU1Z/SU1Z EX -5M-	1NC / 1NO	1NC / 1NO	5 m Connection cable
609.6197.029	F2-SU1Z/SU1Z EX UN -5M-	1NC / 1NO	1NC / 1NO	5 m Connect. cable, Prot. shroud UN
609.6197.030	F2-SU1Z/SU1Z EX UN -9M-	1NC / 1NO	1NC / 1NO	9 m Connect. cable, Prot. shroud UN

## Mobility Handles

The mobility handle option is a complementary accessory for the one (F1) and two (F2) pedal versions. Modification to the foot switch is not required and has retro fitting possibility.

**Mobility handling for foot switches:**

Article number	Designation
399.6000.229	F1-TV
399.6000.230	F2-TV

## Medical Foot Switches

### FBT Series

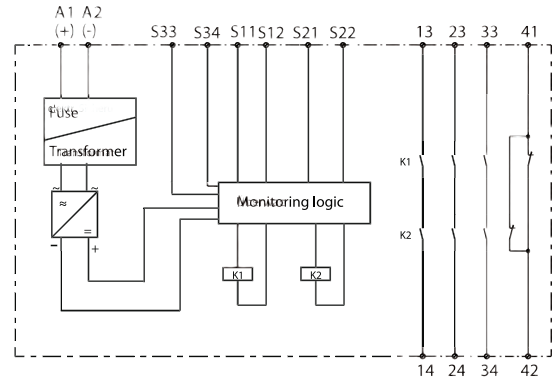

- Modular pedal or joy-pad attachments
- Bar as footrest or for changing position
- Adjustable foot heights ensure the ideal ergonomic position
- High mechanical durability
- 2-level switching possible
- Analogue or digital output signals

### MF Series

- Ergonomically optimized, elegant design
- Easy to clean
- Radial cable entry for effective cable protection
- Analogue or digital output signals
- Protected, internal cover seal
- Customized modular design

**SCR Series**

Whether it's safety switches or safety relays, BERNSTEIN has the complete range of products for your application. Our SCR safety relays are used to evaluate safety circuits, such as those generated by BERNSTEIN position switches, safety switches, safety latching devices, safety cable pull switches, safety sensors or two hand control modules.

With their compact standard mounting rail enclosure, BERNSTEIN SCR relays can be used in a wide variety of applications up to performance level PLE as defined by EN 13849. Conforming to this standard, the SCR relays monitor the correct position and reliable operation of safety sensors and or contacts in safety switches. This evaluation function is used to actuate power elements such as power contactors or frequency converters and stop machines in the case of emergency.

Two positive opening normally-closed contacts are required as the signaling contacts for safety monitoring circuits. Virtually all BERNSTEIN switches feature these contacts. They can be identified by the  $\ominus$  symbol.

Schematic representation of safety relay system

**The product range includes switching relays for evaluating:**

- Safety gate monitors with and without monitored start pushbutton
- Expansion module as auxiliary switching circuit for safety relays
- Two-hand controllers
- Auxiliary controller for safety light curtains/barriers

## SCR - Safety Relays

**IMPORTANT: The actuator for the SLK must be ordered separately. You will find a corresponding overview at the end.**

## ASi Safety Bus Interface Products

The resounding success of the AS interface (actuator-sensor interface) that operates in accordance with the master-slave principle is attributed to its complete ease of use, its ability to be specifically adapted to the simplest elements in machine and system construction as well as the host of unparalleled application advantages it offers. The AS interface has major advantages when control system must be design to conform to the Machinery Directive 2006/42/EC; effective 12/29/2009. Performance level PL<sub>e</sub> and SIL 3 are achieved effortlessly. It is not always possible to set up safety systems with safety switches connected in series while conforming to EN 13849-1. Such configurations present no problems for the AS interface which provides effective solutions up to the highest performance level.

The unshielded two-wire line that carries both data and power renders redundant parallel wiring between sensors and controller unnecessary, thus offering a considerably expanded range of functionality while reducing costs. With piercing technology corresponding field devices, i.e. up to 62 standard/31 safety devices or a mixed configuration, can be connected using the plug & play principle in any position on the yellow, two-core cable. The AS interface master, acting as an independent gateway to higher bus systems (e.g. Profibus), monitors the bus and cyclically polls the bus users.

As an open-ended standard, AS interface guarantees maximum compatibility while providing significant benefits in terms of overall cost considerations. These benefits are reflected in the substantial time and cost savings achieved for initial installation, retrofitting, converting and maintaining systems as well as significantly reducing hardware outlay.

The safety monitor makes the AS interface into a safety bus. It monitors communication between the slaves and the master. The safety monitor shuts down the up to 16 enable circuits as soon as it detects that a safety slave has switched or identifies a fault. A safety-oriented system can be built up by installing a safety monitor and corresponding slaves in an existing AS interface system.

The safety-oriented application is created using the ASIMON program and loaded into the monitor. Programming is carried out by means of simple drag and drop.

### AS interface – from under one roof

All plastic-enclosed safety switches are available in the Safety at Work configuration and other products from the switch range are constantly being equipped with this functionality. With the SHS3, BERNSTEIN offers the first safety hinge switch with AS interface capabilities on the market. Integrated AS interfaces ensure BERNSTEIN components are designed with the smallest possible dimensions. For instance, the mini limit switch Ti2 is the only switch in its class on the market with AS interface capabilities. The safety switch with interlock (SLK) is also available equipped with an AS interface. In addition to switches, gateway masters and terminal boxes, the BERNSTEIN product range also includes power supply units, safety monitors, hand-held programming units as well as an extensive assortment of accessories. The entire comprehensive spectrum makes it possible to offer complete systems solutions.

### Master with gateways to following bus systems are available:

- Profibus
- Profinet
- Ethernet
- Powerlink
- EtherCat
- CanOpen
- DeviceNet
- Modbus
- Allen-Bradley ControlLogix

## Quick-Connect Technology

Direct connection of AS interface formed cable to BERNSTEIN AS interface switch.

The combination of the AS interface cable with ribbon cable terminals and M12 connecting lines guarantees enormous time-saving potentials in installation and connection.

This principle is supported by the direct connection technology of BERNSTEIN AS interface switches. These BERNSTEIN AS interface switches are connected directly to the AS interface cable by means of integrated ribbon cable terminals.

The use of the AS interface cable together with piercing technology ensures the ribbon cable terminal can be easily reposition-ed while retaining the cable's protection class.

### Installation advantages

- Reduced installation time
- Easy installation thanks to piercing technology (in ribbon cables protected against polarity reversal)
- Safety circuits can be retrofitted and converted by simply plugging in individual slaves
- Changes to safety system can be quickly implemented by way of software
- Reduced cable requirements, consequently:
  - Small trailing cables
  - Small cable platforms
  - Easy to clean
  - Low fire load
- No terminal boxes
- No need to prepare enclosures, terminals and screw connections

### Planning advantages

- Straightforward planning – intricate wiring documents are replaced by clearly arranged bus structure diagrams
  - Safety functions quickly created by drag and drop in ASIMON
  - Printout of safety configuration from programming tool

### System advantages

- Uncomplicated interconnection of safety system in machines used in production lines
- Straight forward implementation of safety system cascading
- Faults in the safety system can be diagnosed with a laptop online
- Diagnostic facilities directly at the master and monitor for exact fault location
- System data/polling can be read out via higher-level bus system: Remote servicing
- Fewer I/Os at controller
- Takes up less space in control cabinet

### Economic advantages

- Reduced costs through:
  - Faster installation
  - Fewer circuit diagrams need to be created
  - Faster assignment
  - Fast troubleshooting
  - Extensive diagnostic facilities

User advantages through reduced:

- Machine downtimes thanks to extensive diagnosis and fast troubleshooting
- Commissioning costs
- Maintenance and servicing expenditure

### Further advantages

- Direct connection – no need for M12 connection cable and connection adapters
- Great degrees of freedom in terms of network typology
- Tough even in harsh working environments
- Modularity and perfect integration in higher-level bus systems – an AS interface master can be integrated as a normal slave in a higher-level bus system

## Intelligent Locking, Hinged and Rope Pull Switches

### ASi SLK

With the ASI SLK BERNSTEIN offers a switch with interlock function and integrated Safety at Work interface. You can choose the functional principle, i.e. spring and magnet latching device. LED integrated in the switches indicate the bus status. The inserted actuator and the status of the latching device are also indicated by LEDs. The LEDs can also be optionally controlled via the PLC.

M12-connection	Direct connection
<b>607.3200.058</b> ASI-SLK-F-R1 (Spring Latching / Normally Locked)	-
<b>607.3200.057</b> ASI-SLK-M-R0 (Magnetic Latching / Normally Unlocked)	-

### ASi SHS

With the SHS3 BERNSTEIN offers the only safety hinge switch with AS interface Safety at Work. As on the standard hinge, after adjustment, the user can correct the switching point with the integrated fine adjustment system. When converting a system you can redefine the switching point with the aid of a change kit.

## Intelligent Non-Contact and Keyed Safety Switches

### CSMS

The BERNSTEIN CSMS is a non-contact safety sensor (transponder) with dynamically coded signal transmission for AS Interface – Safety at Work. With the unique allocation of the actuator to the safety switch, protection against tampering is already integrated in the CSMS, making it suitable for concealed installation in non-coded systems.

(Actuator)

### ASI SKT

The ASI SKT with separate actuator for monitoring safety gates and guards is a Type 2 switch and is one of the smallest in its class.

The enclosure and cover are made from fiber glass-reinforced thermoplastic.

LEDs that indicate the status of the ASI slave and bus are integrated in the cover.

Protection class IP65 in accordance with IEC/EN 60529 is guaranteed.

#### M12-connection

### ASI I88

The ASI I88 conforming to EN 50047 is a standard switch used in a wide range of applications.

The enclosure and cover are made from fiber glass-reinforced thermoplastic.

LEDs that indicate the status of the ASI slave and bus are integrated in the cover.

Protection class IP65 in accordance with IEC/EN 60529 is guaranteed.

#### M12-connection

## ASi Masters and Power Supply

### ASI MST

The ASI Master is the “head” of the AS interface system. It organizes communication on the bus and makes available all data to the higher-level system via the gateway. The master shown here is equipped with a Profibus gateway. Gateways are available for following bus systems: Profinet, Ethernet, Powerlink, EtherCat, CanOpen, Devicenet, Modbus, Allen-Bradley ControlLogix

#### Master

**607.3100.001**  
ASI MST PROFIBUS

### ASI SMO

The second generation safety monitor is an emergency stop switching device that features two integrated and a further 14 external enable circuits. The second generation ASI safety monitor features a stainless steel enclosure and an LC display for showing slave addresses and error messages. The safety monitor can be used in applications up to performance level e and SIL 3. The safety application is created with the ASIMON program.

#### Safety monitor

**607.3100.004**  
ASI SMON B+W

### ASI NT

The primary clocked power supply unit for AS interface supplies a 4 amp current. Besides supplying power, the power supply unit is also responsible for data decoupling with respect to the feed source and balancing the two AXI output lines with respect to machine earth.

#### Power supply unit

**607.3100.003**  
ASI NT 4A B+W

## ASi Hand Held Addressing Device and Software

### ASi HND

The ASi hand-held addressing device is a compact unit used for addressing ASi slaves (sensors, actuators and interface modules).

Electromechanical connection is made by the universal connection adapter.

ASi slaves can be addressed in accordance with ASi specifications 2.0, 2.1 and 3.0 with the ASi hand-held addressing device.

### Hand-held addressing device

**607.3100.005**  
ASi HND PRG

### ASi PRO

The safety application of the safety monitor is created with the ASIMON software.

This program makes available a debug view for fast troubleshooting.

In addition, documentation of the safety application can be printed out.

It comes with a cable for connecting the safety monitor to a laptop.

### Software

## ATEX-Approved Product Range

- Ex e, Ex ia and Ex e\ia terminal boxes made from polyester and aluminum
- Ex d limit switches, cable pull switches and foot switches
- Ex mb/Ex tD magnetic switches

### Terminal boxes and empty enclosures

Only materials that correspond to the temperature range T<sub>6</sub> required for Ex enclosures are used in these enclosures and components.

The minimum type of protection rating of all enclosures and screw connections is IP64, other protection classes available on request.

The latching devices on the enclosures are optionally available as captive screw connections or quick-release fasteners.

Various CA versions are available with flange plates.

All built-in components must conform to the relevant approvals.

### Momentary contact, cable pull and foot switches

An Ex d-certified switching element lies at the heart of these Ex-approved switches.

It is available in the several types of switch enclosures. The mechanical actuator and its installation are certified separately.

The approval of additional actuators and switch enclosures from other series is possible on request.

All switches and momentary contact switches feature one NO contact and one NC contact.

### Magnetic switches

The magnetic switches are fitted at the factory with an up to 7 meter long connection cable.

The cable is permanently connected to the switch which is part of the approval.

All sensors are certified for a maximum ambient temperature of 80 °C.

## ATEX - General Information

EX versions of the many of the standard BERNSTEIN switches with ATEX approval are also available for applications involving potentially gas and dust explosive atmospheres.

Approvals for gas "ii G"  
in accordance with  
DIN EN 60079-XX

Approvals for dust "ii D"  
in accordance with  
DIN EN 61241-XX

**Make use of our Ex protection expertise for your applications.**

### What is ATEX?

ATEX = Atmosphère explosive. The European Directive 94/4/EC governs the production and the circulation of devices and components for explosive atmospheres in the European Union. The IEC Standards harmonized throughout the EU stipulate that ATEX products approved by a certification authority can be used anywhere throughout the EU.

In most aspects the certification authorities of non-European countries such as North America, Russia etc. closely follow ATEX-relevant standards so that various approvals can be acquired worldwide based on an ATEX approval. Corresponding national approvals are available on request.

### Where are devices with ATEX approval used?

The fields of application for Ex-protected switches include mixing and processing machines in bakeries (flour dust explosion), processing machines in the food industry where spices are mixed (spice dust explosion), sewer manholes, pump stations and sewage treatment plant (explosive gases "fermentation/digester gas"), waste disposal and recycling industry (various sources of dust and gas explosion), automotive industry and wherever paints and lacquers are used (painting booth) in addition to the classic explosion-hazard branches of industry such as the chemical, petrochemical, pharmaceutical industries as well as the coal, gas and oil-producing and processing industries. Mobile equipment and systems such as vacuum cleaners, stacker lift trucks, fans etc. that are used in the above fields of application must exhibit a corresponding ATEX approval. ATEX products are therefore a part of our everyday lives..

### Who is responsible for what in Ex applications?

The device or component manufacturer must obtain a type approval certificate (ATEX approval) for these devices and components. The machine manufacturer can acquire his system approval based on these approvals and the declaration of conformity.

The manufacturer of a machine or system that is used in Ex applications must obtain a corresponding system approval for the machines it markets. The entire system must be taken into consideration both from a mechanical as well as from an electrical aspect.

In accordance with the ATEX Operator Directive 1999/92/EC (ATEX137), the operator of technical facilities shall be responsible for avoiding or restricting the formation of explosive atmospheres (primary explosion protection), avoiding effective ignition sources (secondary or design explosion protection) and restricting the effect of an explosion to a safe level (tertiary explosion protection). An explosion protection document describing the implemented measures and hazard assessments is to be compiled.

In addition to foot switches and cable pull switches, our current ATEX-certified product range also includes various standard limit switches, limit switches and miniature limit switches.

Customer-specific individual approvals or approvals for switches and components from the BERNSTEIN range not yet certified are available on request.

## ATEX - Technical Information

Technical data	EEX	GC	ENM2	F
<b>Electrical data</b>

# Technical Information

**Part Number**

Bernstein’s actual part number is a 10 digit numeric code. As an example - 6086103008. This is the part number that we prefer to work with because it is unique to every switch version. To make the number easier to work with we add periods to break up the digits. As an example - 608.6103.008.

**Description**

Bernstein also assigns a description to every part. The description gives more information about the actual part. Letter and number codes are used to indicate the switch body, contact configuration, actuator type and any special features.

The description, however, is not unique. Bernstein may offer several different switch versions with the same description.

Here is a typical example of the description break down for a standard limit switch:

<b>I88</b>	<b>A2Z</b> <sup>1)</sup>	<b>AH</b>	<b>M12</b>
Switch group	Switching system <sup>2)</sup>	Actuator	Special features
<ul style="list-style-type: none"> <li>● C2</li> <li>● Ti2</li> <li>● IF</li> <li>● I88</li> <li>● Bi2</li> <li>● ENK</li> <li>● GC</li> <li>● SN2</li> <li>● ENM2</li> <li>● D</li> </ul>	<ul style="list-style-type: none"> <li>● U1</li> <li>● SU1</li> <li>● A2</li> <li>● SA2</li> <li>● E2</li> <li>● SE2</li> </ul>		<ul style="list-style-type: none"> <li>● M12 connection</li> <li>● Actuator turned 90°, 180°, 270°</li> <li>● Special switching forces</li> <li>● Special temperature ranges</li> <li>● Other special features on request</li> </ul>

<sup>1)</sup> The letter Z suffix to the designation of the switching function denotes the mechanical positive opening action of the normally-closed contacts. In technical data sheets, the positive opening point is identified by the international symbol .

<sup>2)</sup> Please refer to the proceeding pages in the catalogue to establish which switching system can be used in the switch groups.

## Switching function example

NC = Normally-closed contact  
NO = Normally-open contact

PLEASE NOTE - Due to size limitations, the 3 contact versions are only available in larger switch body styles.

### U1Z

Slow-action contact, 1 NC, 1 NO

### SU1Z

Snap-action contact, 1 NC, 1 NO

### A2Z

Slow-action contact, 2 NC

### SA2Z

Snap-action contact, 2 NC

### E2

Slow-action contact, 2 NO

### SE2

Slow-action contact, 2 NO

### UV1Z

Slow-action contact, with overlapping contacts, 1 NC, 1 NO

### U15Z

Slow-action contact, 2 NC, 1 NO

### UV15Z

Slow-action contact, with overlapping contacts, 2 NC, 1 NO

### U16Z

Slow-action contact, 1 NC, 2 NO

### UV16Z

Slow-action contact, with overlapping contacts, 1 NC, 2 NO

The actuating forces and travel distances are subject to tolerances.

In Type 1 and Type 2 position switches, the tolerances are independent of the switching system and switching function.

Function	Tolerance
Switching travel	± 0.25 mm
Switching angle	± 3.5°
Switching force in N	± 10%
Actuating torque in	± 10%

Table 1

## Switching systems

The switching element is the heart of all electromechanical switching devices and must be properly matched to the application. Essentially there are two basic types of switching systems that are different terms of their mechanical design and their range of application:

- Slow-action contacts
- Snap-action contacts

### Slow-action contacts

- When activated, the normally-closed and normally-open contact functions correspond to the movement of the impact pin
- The approach speed controls the contact opening (closing) time
- Large distance/actuating travel between normally-closed and normally-open contact function
- The switching points are identical in forward and reverse travel

Fig. 1 shows the contact force during the switching cycle of a slow-action contact.

### Overlap

- The switching principle of snap-action contacts makes overlapping of the NC/NO contact function possible. The term overlap refers to the area, in which both the normally-closed contact as well as the normally-open contact are closed in connection with a changeover switch with delay.

Fig. 2 shows the contact force during the switching cycle of a slow-action contact with overlap.

### Snap-action contact

- When activated, the normally-closed contact function is immediately followed by the normally-open contact function
- In this configuration there is no overlap of the NC/NO contacts. The switch provides a distinct OR-function.
- The changeover accuracy is not dependent on the approach speed
- Offers effective suppression of DC arcing
- Reliable contact activation for extremely slow approach speeds
- The snap mechanism triggers the full opening width of the contact on reaching the changeover point
- Due to the change of force in the mechanical system, a different switching point occurs in forward and reverse travel. The lag is referred to as hysteresis.

Fig. 3 shows the contact force during the switching cycle of a snap-action contact.

- 1) Changeover point in forward travel
- 2) Changeover point in reverse travel

### Switching diagram

The switching diagram describes the function of the switching device in detail.

It combines the mechanical input variables that act on the contact system via the actuator with the electrical output variables. The user can determine the following information from the switching diagram:

- Mechanical input variables (force, travel, torque, angle)
- Electrical contact-making in forward and reverse travel
- Terminal designation
- Point at which positive opening is achieved
- Type of contact system

Slow-action contact      Snap-action contact

- Contact closed
- Contact open

## Contact designation

In accordance with DIN 50013 and DIN 50005 the terminal designations of the contact elements are always made up of two digits.

The contact rows are numbered consecutively with the first digit indicating the order of the actuation. Contacts of a switching element that belong together have the same allocating digit.

The second digit is the function digit that indicates the type of contact element.

- 1-2 Normally-closed contact
- 3-4 Normally-open contact
- 5-6 Normally-closed contact with delayed opening
- 7-8 Normally-open contact with delayed closing

## Protection class

The protection class of an enclosed device indicates the degree of protection. The degree of protection includes the protection of persons against contact with parts under voltage and the protection of equipment against the infiltration of foreign bodies and water. BERNSTEIN standard enclosures mainly correspond to protection classes IP65 and IP67. Higher protection ratings are also available for individual customer solutions. In accordance with DIN EN 60521 (IEC 529), the numerals used in the protection rating denote the following:

1st digit Degree of protection against contact and infiltration of foreign bodies

2nd digit Degree of protection against infiltration of water

### Example IP65:

- 6 =**
  - Complete protection against contact with components under voltage or with internal moving parts
  - Protection against dust infiltration
- 5 =**
  - A water jet directed from all directions at the device must not have damaging effects
  - Protection against water from a hose

## Enclosures

Limit switches are supplied either in a molded enclosure or a metal enclosure. Which material is to be selected for a specific application depends on the ambient conditions, the location as well as several other factors.

Molded limit switches provide protective insulation and are resistant to many aggressive chemicals and liquids. The formation of condensation water in moist environments with extreme temperature fluctuations is significantly reduced with molded enclosures.

In insulation-enclosed switches the switching elements are integrated directly in the molded enclosure and are therefore not replaceable (complete switching devices).

Metal-enclosed limit switches are able to withstand high mechanical loads, they can also be used wherever hot metal chips and sparks occur and are resistant to many solvents and detergents. The switching elements in metal-enclosed switches are often integrated in the metal enclosure as modular built-in switches. The enclosure has a VDE-compliant connection for the PE conductor.

## Safety switches

The range of applications for limit switches has changed over time. Limit switches were previously used primarily to detect product and end of travel positions, today they are increasingly assuming functions designed to protect persons and products in machine, equipment and plant construction.

The BERNSTEIN range of safety switches offers the right solution for the most diverse applications in many branches of industry. Particularly when it comes to safety, users appreciate the fact that they are able to source all required safety switches and receive professional advice from one place.

The main factors governing the selection of safety equipment include the ambient conditions, installation situation and risk analysis.

A switching device that can be used for safety functions is identified by the standardised symbol conforming to EN 65000-41 and EN 65000-42. The switches can, of course, also be used for pure position monitoring purposes.

Safety switches are divided into two categories, Type 1 and Type 2. The difference is in the actuating elements which are completely integrated in the enclosure in Type 1 and separated from the switching element in Type 2.

Type 1

Type 2

= **Mechanical positive opening action**

The term positive opening action refers to contact separation as the direct result of a defined movement of the switch actuator by means of non-spring parts. All parts involved in contact separation must be directly connected. The positive opening distance describes the minimum travel distance from the start of actuation of the operating element up to the point where positive opening action of the opening contacts is completed.

DIN EN 60947-5-1 defines two types of positive opening action contacts:

### Type Za

- Positively opening contacts not galvanically isolated

### Type Zb

- Positively opening contacts galvanically isolated

Galvanic isolation describes the isolation of electrically conducted parts by insulating material or by air gaps.

In switching devices with several contact elements, galvanically isolated contact elements make it possible to switch voltages with different potential (e.g. normally-closed contact in safety circuit, normally-open contact for indicator).

In accordance with the appropriate safety requirements, protective devices (guards) must be mounted on machines, devices and systems that perform hazardous movements. Safety switches in the form of electromechanical switching devices are used to create safe access to these guarded areas, since they offer the following advantages:

- High degree of safety
- Non-susceptibility to interference
- Safety status easily checked on site

Direct mechanical drives or coupling elements in the form of levers, rods, gearwheels etc. are necessary to ensure optimum operation of these safety components.

Switching devices that are used for safety functions must be identified with the symbol  internationally standardized in accordance with DIN EN 60947-5-1. In defining the class of switching devices, this symbol denotes two important properties that must be met for personal protection applications:

- Mechanical positive opening action
- Disruptive breakdown voltage > 2.5 kV

### Disruptive breakdown voltage

In accordance with DIN EN 60947-5-1, the open contacts must be able to maintain a minimum surge voltage of 2.5 kV without disruptive breakdown.

## Limit Switch - Spindle-Mounted Lever

### Switching devices with spindle-mounted lever enclosure

On delivery, contact-making takes place in both pivot directions corresponding to the switching diagrams.

### Adaptation of basic actuator setting on spindle

The basic setting of the device can be varied in steps and fixed for exact positioning:

- AH, AHS, AHZ, AF, AD, AV:  
Adjustment in steps of 15° (Fig. 1)
- AHS-V:  
Adjustment in steps of 7.5° or 15° (only here p ) by repositioning the intermediate piece (Fig. 2)
- Adaptation AV, AD:  
Adjustment in radial direction
- AH, AHS, AHS-V, AHZ, AV:  
The roller levers can be used in a different axial actuating plane by repositioning by 180° (Fig. 3 and 4)

Fig. 1

Fig. 2

Fig. 3

Fig. 4

### Adaptation of direction-independent switching function

With actuators AHS, AHS-V, AV, AD.

On delivery, contact-making takes place in both pivot directions corresponding to the switching diagrams. An idle function in the required pivot direction is achieved by simply repositioning the actuator cam (Fig. 5 and 6).

Fig. 5

Fig. 6

The idle function can be used in control systems that cannot process successive rebound pulses caused by oscillatory movement of extremely long AV/AD actuators.

### Positive opening action Forward and return AHZ

For special safety applications, the positive opening action of the normally-closed contacts takes place both in forward (moving in one direction) as well as in return (moving back to home position) direction. For personal protection applications movement of the roller must be restrained in a guide block in both directions (Fig. 7 and 8).

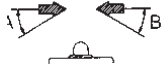

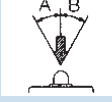

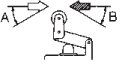

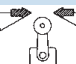

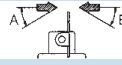

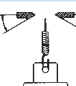

Fig. 7

Fig. 8

### Note on changing actuators AH, AHS, AHS-V, AHZ, AF, AD, AV, DGH, DGK

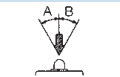

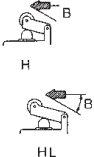

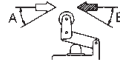

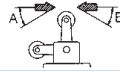

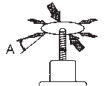

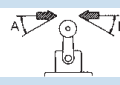

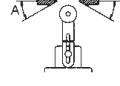

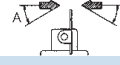

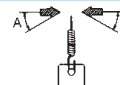

The guaranteed as-delivered properties change when the actuation directions are adjusted and when actuators are repositioned by 90°.

The user himself must ensure that the device achieves safe operation for its intended purpose.

## Switch Systems

### Switch systems – Economy meets safety

BERNSTEIN electromechanical switches offer a huge price/performance value and feature an impressive range of products suitable for many operating voltages. The range extends from limit switches, enclosed in insulating material or metal, through foot switches to safety switching devices. The AS-i compatible products save time and material in installation and provide cost advantages in operation. The comprehensive range of designs, sizes and switching functions makes BERNSTEIN an ideal choice for a large variety of switching applications.

## Sensor Systems

### Sensor systems – Compact intelligence

BERNSTEIN'S line of sensors offer extremely fast and precise operation without interference and mechanical wear. Suitable of a large variety of applications, their reliability and the compact dimensions offer a clear advantage in design and function. In addition to ultra sonic sensors and level switches, customers can choose from a wide range of inductive, capacitive, magnetic or optical sensors.

## Enclosure Systems

### Enclosure systems – Function and design

With a long history of manufacturing enclosures, BERNSTEIN combines superior enclosure technology and state of the art manufacturing to provide an extensive range of aluminum and polyester control enclosures. BERNSTEIN enclosures conform to many of the standards used in medical technology and the food processing industries. ATEX rated products, for use in potentially explosive atmospheres are also available.

**TITLE** - Title to the products of ALTECH shall remain with ALTECH until payment is made in full by Customer. Such reservation of title is for the purpose of securing the purchase price and shall not relieve Customer of the duty to inspect the products upon receipt, to notify ALTECH of any deficiencies or defects, and to exercise due care in the use, installation, operation, and maintenance of the products when on the premise of the Customer or under the control of the Customer. Notwithstanding any reservation of title by ALTECH, risk of loss shall pass to customer at any time of shipment.

**SHIPMENT AND DELIVERY** - All orders for destination in the mainland United States (less Hawaii, Alaska and non-continent United States possessions) will be shipped F.O.B. Flemington, N.J. All destination, shipping and other charges shall be paid by the Customer in accordance with ALTECH's then current shipping and billing practices.

Delivery dates given in the acceptance of any order are approximate. ALTECH shall not be liable for delays in delivery or in performance due to causes beyond its reasonable control including acts of God, acts of Customer, acts of civil or military authority, fires, strikes or other labor disturbances, war, riot or delays in transportation. In the event of such delay, the date of delivery or performance shall be extended for a period equal to the time lost by reason of the delay.

**PRICE** - PRICES in any ALTECH publication are subject to change without prior notification. Catalog prices are based on prices published in the current price list. All written quotations are valid for thirty (30) days from the date of quotation. Customer shall pay all sales, use, excise or similar taxes whenever ALTECH must itself pay and/or collect such tax from Customer arising out of the sale.

**PAYMENT** - Customer agrees to make payment within thirty (30) days of date of the invoice from ALTECH. Customer agrees to pay a late payment charge of one and one-half percent (1.5% per month, or the maximum late payment charge permitted by applicable law, whichever is less, on any unpaid amount for each calendar month (or fraction thereof) that such payment is in default. Orders amounting to less than \$100.00 will be billed at \$100.00 plus freight. Full carton purchases are required. In the event of referral to an attorney for collection, reasonable attorney's fees for collection of the overdue amount shall be paid by Customer. In the event payment is not received within 30 days from the date of invoice, any discount shall be cancelled and the full list price will be due.

**LIMITED WARRANTY** - ALTECH warrants to Customer that the equipment purchases shall be free from defects in material and workmanship under normal use and service for a period of one year from shipment.

Written notice as an explanation of the circumstances of any claim that the equipment has proved defective in material or workmanship shall be given promptly by the Customer to ALTECH.

ALTECH will not be liable for any misuse, improper operations, improper installation, improper maintenance, alteration, modification, accident or unusual degradation of the equipment or parts due to an unsuitable installation environment.

No representation of other affirmation of facts, including but not limited to statements regarding capacity, suitability for use or performance of the equipment, shall be or be deemed to be a warranty or representation by ALTECH for any purpose, nor give rise to any liability or obligation of ALTECH whatsoever.

Customer's sole and exclusive remedy in the event of breach of warranty, as set forth herein, is expressly limited to (1) the correction of the defect by adjustment, repair, modification, or replacement, or (2) issuance of a credit or refund of the purchase price for the defective equipment at ALTECH's election and sole expense.

EXCEPT AS SPECIFICALLY PROVIDED IN THIS AGREEMENT, THERE ARE NO OTHER WARRANTIES EXPRESSED OR IMPLIED INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

THIS WARRANTY EXTENDS ONLY TO THE CUSTOMER FROM ALTECH OR ITS AUTHORIZED DISTRIBUTOR.

**LIMITATION OF LIABILITY** - IN NO EVENT, SHALL ALTECH BE LIABLE FOR LOSS OF PROFITS, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER SIMILAR DAMAGES ARISING OUT OF ANY BREACH OF THIS AGREEMENT OR OBLIGATIONS UNDER THE AGREEMENT.

ALTECH SHALL NOT BE LIABLE FOR ANY DAMAGES CAUSED BY DELAY IN SHIPMENT, INSTALLATION OR FURNISHING OF EQUIPMENT OR SERVICES UNDER THIS AGREEMENT.

No action arising out of any claimed breach of this Agreement may be brought by either party more than two (2) years after the cause of action has accrued.

**PATENT INDEMNITY** - ALTECH shall defend or settle any suit or proceeding brought against Customer based on a claim that any equipment made to ALTECH design and furnished hereunder constitutes an infringement of any existing United States patent, provided (ALTECH) is notified promptly in writing and is given complete authorization and information required for the defense, and ALTECH shall pay all damages and costs awarded against Customer, but shall not be responsible for any costs, expense or compromise incurred or made by Customer without ALTECH's prior written consent. If any equipment is in ALTECH's opinion likely to or does become the subject of a claim for patent infringement, ALTECH may at its option and expense procure for Customer the right to continue using the device, modify it to become non-infringing, but in the event ALTECH is not reasonably able to modify, substitute, or otherwise procure for Customer the right to continue using it, ALTECH will remove such equipment and refund to Customer the amount paid in excess of a reasonable rental for past use.

ALTECH shall not be liable for any infringement or claim based upon use of the equipment in combination with other equipment not supplied by ALTECH or with modifications made by Customer.

The foregoing states the entire liability of ALTECH to Customer arising from patent infringement.

**SELLER'S REMEDIES** - Should Customer fail to make any payment within ten (10) days of its due date, or fail to perform any other of the Customer's obligation hereunder upon thirty (30) days written notice, or should Customer be or become insolvent or be a party to any bankruptcy receivership proceeding prior to full payment of all amounts payable hereunder, ALTECH may: (a) with or without demand or notice to customer declare the entire amount unpaid immediately due and payable; (b) enter upon the premises where the equipment may be found and remove it (Customer shall assemble the equipment and make it available to ALTECH at a place reasonably convenient to both parties and shall permit and assist ALTECH in effecting the retaking and removal of the equipment); and (c) sell any or all the equipment as permitted under applicable law, applying the proceeds of the sale to payment of the expenses of retaking, repairing and selling the equipment, reasonable attorney fees and to the satisfaction of all indebtedness then due and unpaid under this Agreement. Any surplus shall be paid to Customer and any deficiency shall be paid to ALTECH by Customer.

The remedies provided herein shall be cumulative and in addition to all other remedies provided by law or equity or under the Uniform Commercial Code.

**GOVERNING LAW** - This agreement will be governed by the Laws of the State of New Jersey.

**GENERAL** - This Agreement shall only become effective and binding when either (a) it has been accepted and executed by an authorized representative of ALTECH, or (b) the equipment has been shipped to Customer, with or without acceptance in writing hereon. Notice of acceptance is hereby waived by Customer. Customer hereby acknowledges receipt of a true and complete copy hereof.

No addition to or modification of any of the Terms and Conditions of Sale as they appear herein shall be binding upon ALTECH unless signed in writing by duly authorized representative of ALTECH in Flemington, N.J.

Typographical and clerical errors in quotations, orders and acknowledgments are subject to correction.

This Agreement is not assignable without the prior written consent of ALTECH. Any attempt to assign any of the rights, duties or obligations of this Agreement without such consent is void.

If any provision or provisions of this Agreement shall be held to be invalid, illegal or unenforceable, the validity, legality and enforceability, of the remaining provisions shall not in any way be affected or impaired thereby.

ALTECH is not responsible for failure to fulfill its obligation under this Agreement due to causes beyond its control, or except as agreed herein.

THE CUSTOMER ACKNOWLEDGES THAT HE HAS READ THE AGREEMENT, UNDERSTANDS IT, AND AGREES TO BE BOUND BY ITS TERMS AND CONDITIONS. FURTHERMORE, THE CUSTOMER AGREES THAT IT IS THE COMPLETE AND EXCLUSIVE STATEMENT OF THE AGREEMENT BETWEEN THE PARTIES, WHICH SUPERSEDES ALL PROPOSALS OR PRIOR AGREEMENTS, ORAL OR WRITTEN, EXPRESSED OR IMPLIED, AND ALL OTHER COMMUNICATIONS BETWEEN THE PARTIES RELATING TO THE SUBJECT MATTER OF THIS AGREEMENT.

## Here are other great products available from Altech!

### Universal Power Distribution Systems

Altech Corp's new catalog features various innovative ways to distribute power in your panel.

- Well known UL508 busbars in two sizes and ratings up to 200A/480V AC
- Introducing the UL489 recognized busbar for Altech's line of Miniature Molded Case Circuit Breakers with an industry leading rating of 115A/480V AC
- New ADP distribution system utilizing 0.25 quick-connects
- Extended power distribution block line

### Liquid Tight Strain Reliefs

This 64-page catalog introduces Altech's full line Liquid Tight Strain Reliefs (Cord Grips) which are used to seal cable entries, keep contaminants from entering enclosures, provide strain relief and thus reduce stress on components and termination points inside enclosures. Available in standard, high-performance, and economy versions, functions include Straight-Through, Increased Strain Relief, Bend Protection, Pull/Bend Protection, Multi-conductor, Flat Cable and EMI/RFI. They can be used with almost any type of cable, cord or conductor - solid, stranded, flat, shielded, high temperature, etc.

### Industrial Enclosures

Altech's expanded line of TK Industrial Enclosures, with metric knockouts, is here. Now our entire line of industrial enclosures is in metric. Metric knockouts align with international standards making selection easier and more universal. Plus the PG standard is still available. All of Altech's enclosures are internationally accepted and stand up to the harshest environments. They protect against dust, water and corrosion while enhancing the value of your product. Rated up to IP66 (NEMA type 4x), Altech enclosures are available in a wide range of sizes.
